2.1.1 Numerical input via the navigation buttons

- Press and current setting will be displayed. The first digit will be flashing and is ready for changing.
- ➡ If you do not wish to change the first digit, press and the second digit will start flashing.

Each time you press , the display will move to the subsequent digit, after the last digit the display will return to the first digit.

 \Rightarrow To change the selected (flashing) digit, press repeatedly until the desired

value is displayed. Then press to access further digits and change them by

 \Rightarrow Complete your entry by

LED +/√/-	Indicators for weighing with tolerance range

3 Basic Information (General)

3.1 Proper use

The display unit acquired by you is used in combination with a weighing plate and serves to determine the weighing value of material to be weighed. It is intended to be used as a "non-automatic weighing system", i.e. the material to be weighed is manually and carefully placed in the centre of the weighing plate. As soon as a stable weighing value is reached the weighing value can be read.

3.2 Improper Use

Do not use display unit for dynamic weighings. In the event that small quantities are removed or added to the material to be weighed, incorrect weighing results can be displayed due to the "stability compensation" in the display unit. (Example: Slowly draining fluids from a container on the balance.)

Do not leave permanent load on the weighing pan. This may damage the measuring system.

Impacts and overloading exceeding the stated maximum load (max) of the weighing plate, minus a possibly existing tare load, must be strictly avoided. Both, the weighing plate and the display unit may be damaged during this process.

Never operate display unit in explosive environment. The serial version is not explosion protected.

Changes to the display unit's design are not permitted. This may lead to incorrect weighing results, safety-related faults and destruction of the display unit.

The display unit may only be operated in accordance with the described default settings. Other areas of use must be released by KERN in writing.

3.3 Warranty

Warranty claims shall be voided in case

- Our conditions in the operation manual are ignored
- The appliance is used outside the described uses
- The appliance is modified or opened
- Mechanical damage or damage by media, liquids, natural wear and tear
- The appliance is improperly set up or incorrectly electrically connected
- The measuring system is overloaded

English

3.4 Monitoring of Test Resources

In the framework of quality assurance the measuring-related properties of the display unit and, if applicable, the testing weight, must be checked regularly. The responsible user must define a suitable interval as well as type and scope of this test. Information is available on KERN's home page (<u>www.kern-sohn.com</u> with regard to the monitoring of display units' test substances and the test weights required for this. In KERN's accredited DKD calibration laboratory test weights and display units may be calibrated (return to the national standard) fast and at moderate cost.

4 Basic Safety Precautions

4.1 Pay attention to the instructions in the Operation Manual

Carefully read this operation manual before setup and commissioning, even if you are already familiar with KERN balances.

4.2 Personnel training

The appliance may only be operated and maintained by trained personnel.

5 Transport and storage

5.1 Testing upon acceptance

When receiving the appliance, please check packaging immediately, and the appliance itself when unpacking for possible visible damage.

5.2 Packaging / return transport

- ➡ Keep all parts of the original packaging for a possibly required return.
- \Rightarrow Only use original packaging for returning.
- ➡ Prior to dispatch disconnect all cables and remove loose/mobile parts.
- \Rightarrow Reattach possibly supplied transport securing devices.
- ⇒ Secure all parts such as the glass wind screen, the weighing platform, power unit etc. against shifting and damage.

6 Unpacking and placing

6.1 Installation Site, Location of Use

The display units are designed in a way that reliable weighing results are achieved in common conditions of use.

Precise and fast work is achieved by selecting the right place for your display unit and your weighing plate.

On the installation site observe the following:

- Place the display unit and the weighing plate on a stable, even surface.
- Avoid extreme heat as well as temperature fluctuation caused by installing next to a radiator or in the direct sunlight;
- Protect the display unit and the weighing plate against direct draft from open windows or doors.
- Avoid jarring during weighing;
- Protect the display unit and the weighing plate against high humidity, vapours and dust.
- Do not expose the display unit to extreme dampness for longer periods of time. Non-permitted condensation (condensation of air humidity on the appliance) may occur if a cold appliance is taken to a considerably warmer environment. In this case, acclimatize the disconnected appliance for ca. 2 hours at room temperature.
- Avoid static charge of goods to be weighed or weighing container.

Major display deviations (incorrect weighing results) may be experienced should electromagnetic fields (e.g. due to mobile phones or radio equipment), static electricity accumulations or instable power supply occur. Change location or remove source of interference.

6.2 Unpacking

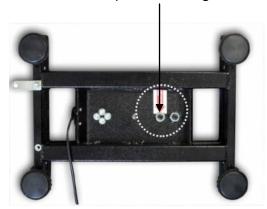

Take the display unit carefully out of its packaging, remove the plastic jacket and install it at the designated work space.

6.3 Scope of delivery / serial accessories:

- Display Unit
- Mains adapter
- Support base incl. wall bracket
- Operating instructions

6.4 Transportation lock (illustration example)

Please note: if the display unit is used together with platform with transportation lock, this transportation lock must be released prior to use:

Transport Securing

6.5 Error message

As soon as an error message appears in the balance display, the balance must not more be used, e.g. Err 4

6.6 Placing

Mount the display unit in a way that facilitates operation and where it is easy to see.

Usage with support base (KFB-TM only)

Push support base holder in guide rail [8] up to end stop [9], see chap. 2.

Usage with wall mount (KFB-TM only)

Use the wall mount to affix the display unit to the wall.

Using with tripod (optional)

An optional tripod (KERN BFS-07) is available if the display unit is to be mounted in a raised position.

6.7 Mains connection

Power is supplied via the external mains adapter. The stated voltage value must be the same as the local voltage.

Only use original KERN mains adapters. Using other makes requires consent by KERN.

6.8 Storage battery operation (optional)

Before the first use, the battery should be charged by connecting it to the mains power supply for at least 12 hours.

If the weight display shows this is an indication that the capacity of the rechargeable battery is almost exhausted. The unit will be ready for operation for approx. another 10 hours before switching off automatically. Charge the battery with the help of the supplied power pack.

The LED display informs you during loading about the loading status of the rechargeable battery.

red: Voltage has dropped below prescribed minimum.

green: Battery is completely discharged

yellow: Charging storage battery

To conserve energy, enable the automatic switch-off function "AUTO OFF", see chap. 7.14.

6.9 Adjustment

As the acceleration value due to gravity is not the same at every location on earth, each display unit with connected weighing plate must be coordinated - in compliance with the underlying physical weighing principle - to the existing acceleration due to gravity at its place of location (only if the weighing system has not already been adjusted to the location in the factory). This adjustment process must be carried out for the first commissioning, after each change of location as well as in case of fluctuating environment temperature. To receive accurate measuring values it is also recommended to adjust the display unit periodically in weighing operation.

•	In weighing systems with a resolution of < 15 000 dividing steps an adjustment is recommended. In weighing systems with a resolution of > 15 000 dividing steps a linearisation is recommended (see chap. 6.10).
•	Prepare the required adjustment weight. The weight to be used depends on the capacity of the scale. Carry out adjustment as near as possible to the scale's maximum weight. Info about test weights can be found on the Internet at: http://www.kern-sohn.com.
•	Observe stable environmental conditions. Stabilisation requires a certain warm-up time.
	•

6.9.1 Verified weighing systems

In verified weighing systems the menu item for adjustment "P2 mode" is blocked.

KERN KFB-TM

Ĭ

To disable the access lock, destroy the seal and actuate the adjustment switch. Position of the adjustment switch see chap. 6.11

KERN KFN-TM

To override the blocked access you will have to destroy the seal before calling up the menu and to short-circuit the two contacts on the circuit board [K2], using a jumper (See chap. 6.11).

Attention:

After destruction of the seal the weighing system must be re-verified by an authorised agency and a new verification wire/seal mark fitted before it can be reused for applications subject to verification.

Call up menu:

1.	Switch-on balance and during the selftest press	Po
2.	Press (M+), (E), (TARE), subsequently, the first menu block "PO CHK" will be displayed.	
3.	Press repeatedly until "P2 mode" will be displayed. For the KFB-TM model operate the adjustment switch.	(P2ñod)
4.	Press and select the set weighing scales type by	Silir
	Sigr = Single-range balance	
	dURL = Dual range balance	
	dURL 2 = Multi-interval balance	GUAL 2
5.	Acknowledge with	CoUnt
6.	Press repeatedly until "CAL" will be displayed.	
7.	Confirm with and select setting "noLin" by	nolin

How to carry out an adjustment:

↔	Confirm menu setting "noLin" by C. Ensure that there are no objects on the weighing plate.	nolin ‡ Unld
Ŷ	Wait for stability display, then press	
⇔	The currently set adjustment weight will be displayed.	30.000 kg
	To change by using the navigation buttons (see chap. 2.1.1) select the desired setting, the active digit is flashing. Acknowledge with	
Ŷ	Carefully place adjusting weight in the centre of the weighing plate. Wait for stability display, then press	PRSS
ᡎ	After the adjustment the balance will carry out a self-test. Remove adjusting weight during selftest, balance will return into weighing mode automatically. An adjusting error or incorrect adjusting weight will be indicated by the error message; repeat adjustment procedure.	tinat lansi O.OOO kg

6.9.2 Non verifiable weighing systems Call up menu:

- 1. Switch-on balance and during the selftest press
- 2. Press subsequently , be first menu block "PO CHK" will be displayed.
- 3. Press repeatedly until "P3 CAL" will be displayed.
- 4. Confirm with ; press repeatedly until "CAL" appears.
- 5. Acknowledge using , the current setting is displayed.
- Press to confirm; press to select setting. noLin = adjustment LineAr = linearization, see chap. 6.10

How to carry out adjustment:

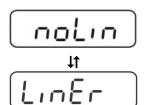

- ⇒ Confirm menu setting "noLin" by .
 Ensure that there are no objects on the weighing plate.
- \Rightarrow Wait for stability display, then press
- \Rightarrow The currently set adjustment weight will be displayed.
- ➡ To change by using the navigation buttons (see chap. 2.1.1) select the desired setting, the active digit is flashing.
- \Rightarrow Acknowledge with \bigcirc
- ⇒ Carefully place adjusting weight in the centre of the weighing plate. Wait for stability display, then press
- After the adjustment the balance will carry out a self-test. Remove adjusting weight **during** selftest, balance will return into weighing mode automatically. An adjusting error or incorrect adjusting weight will be indicated by the error message; repeat adjustment procedure.

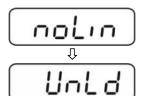

6.10 Linearization

Linearity shows the greatest deviation of a weight display on the scale to the value of the respective test weight according to plus and minus over the entire weighing range. If linearity deviation is discovered during a testing instrument control, you can improve this by means of linearization.

- 1
- In balances with a resolution of > 15 000 dividing steps carrying out a linearisation is recommended.
- Carrying out linearization is restricted to specialist staff possessing well acquainted with the workings of weighing scales.
- The test weights to be used must be adapted to the weighing scale's specifications; see chapter "testing instruments control".
- Observe stable environmental conditions. Stabilisation requires a certain warm-up time.
- After successful linearisation you will have to carry out calibration; see chapter "testing instruments control".
- The adjustment is locked for verified balances. To disable the access lock, destroy the seal and actuate the adjustment switch. Position of the adjustment switch see chap. 6.11

6.10.1 Verified weighing systems:

- ⇒ Menu item P2 mode⇒Cal⇒Call up liner, see chap. 6.9.1
- \Rightarrow Confirm by \square , the password query "Pn" will be displayed.
- $\Rightarrow \text{ Press subsequently } \underbrace{\overset{\text{BG}}{\overset{\text{NET}}{\overset{\text{ES}}{\overset{\text{RET}}}{\overset{\text{RET}}{\overset{\text{RET}}{\overset{\text{RET}}{\overset{\text{RET}}{\overset{\text{RET}}}{\overset{\text{RET}}{\overset{\text{RET}}{\overset{\text{RET}}{\overset{\text{RET}}{\overset{\text{RET}}}{\overset{\text{RET}}{\overset{\text{RET}}{\overset{\text{RET}}{\overset{\text{RET}}}{\overset{\text{RET}}{\overset{\text{RET}}{\overset{\text{RET}}}{\overset{\text{RET}}}{\overset{\text{RET}}{\overset{\text{RET}}}{\overset{\text{RET}}{\overset{\text{RET}}}{\overset{\text{RET}}{\overset{\text{RET}}}{\overset{\text{RET}}{\overset{\text{RET}}}{\overset{RET}}}{\overset{\text{RET}}}{\overset{\text{RET}}}{\overset{\text{RET}}}{\overset{\text{RET}}}{\overset{\text{RET}}}{\overset{\text{RET}}}}{\overset{\text{RET}}}{\overset{\text{RET}}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}{\overset{RET}}}{\overset{RET}}{\overset{RET}}{\overset{RET}}}{\overset{RET}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}{\overset{RET}}}{\overset{RET}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}{\overset{RET}}}{\overset{RET}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}}{\overset{RET}}}{\overset{RET$
- \Rightarrow Wait for stability display, then press
- When "Ld 1" is displayed, put the first adjustment weight (1/3 max) carefully in the centre of the weighing platform. Wait for stability display, then press
- ⇒ When "Ld 2" is displayed, put the second adjustment weight (2/3 max) carefully in the centre of the weighing platform.

Wait for stability display, then press Ca.

When "Ld 3" is displayed, put the third adjustment weight (max) carefully in the centre of the weighing platform. Wait for stability display, then press

After linearisation the balance will carry out a self-test. Remove adjusting weight **during** selftest, balance will return into weighing mode automatically.

6.10.2 Non-verified weighing systems

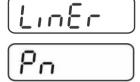

- ⇒ Call-up menu item P3 CAL⇔Cal⇒Liner, see chap. 6.9.1
- \Rightarrow Confirm by , the password query "Pn" will be displayed.
- \Rightarrow Wait for stability display, then press
- When "Ld 1" is displayed, put the first adjustment weight (1/3 max) carefully in the centre of the weighing platform. Wait for stability display, then press
- ⇒ When "Ld 2" is displayed, put the second adjustment weight (2/3 max) carefully in the centre of the weighing platform.

Wait for stability display, then press

⇒ When "Ld 3" is displayed, put the third adjustment weight (max) carefully in the centre of the weighing platform. Wait

for stability display, then press

After a successful linearisation the balance will carry out a self-test. Remove adjusting weight **during** selftest, balance will return into weighing mode automatically.

6.11 Verification

General introduction:

According to EU directive 90/384/EEC balances must be officially verified if they are used as follows (legally controlled area):

- a) For commercial transactions if the price of goods is determined by weighing.
- b) For the production of medicines in pharmacies as well as for analyses in the medical and pharmaceutical laboratory.
- c) For official purpose.
- d) For manufacturing final packages.

In cases of doubt, please contact your local trade in standard.

Verification notes:

An EU Qualification Approval is in existence for verified weighing systems. If a balance is used where obligation to verify exists as described above, it must be verified and re-verified at regular intervals.

Reverification is carried out according to the relevant national statutory regulations. The validity for verification of balances in Germany is e.g. 2 years.

The legal regulation of the country where the balance is used must be observed!

• Verification of the weighing system is invalid without the "seal".

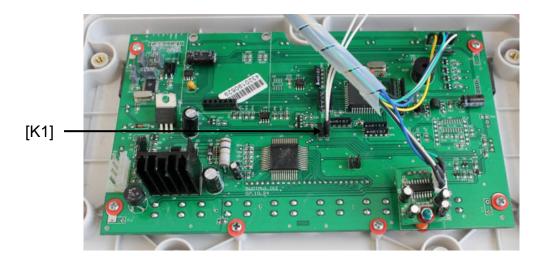

Notes on verified weighing systems

KFB-TM:

Access to conductor plate:

- Remove seal
- Open display unit
- The application of the display unit as a weighing system able to be verified requires that the contacts of the circuit board are short-circuited with the help of a jumper [K1].

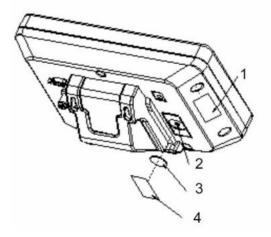

For non verifiable weighing systems remove the jumper.

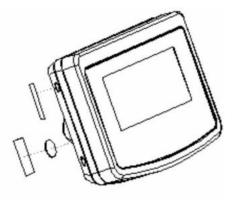

In verified weighing systems the menu item for adjustment, "P2 mode" will be blocked.

To disable the access lock, destroy the seal and actuate the adjustment switch.

Position of seals and adjusting switch

- 1. Self-destroying seal mark
- 2. Adjustment switch
- 3. Cover of adjustment switch
- 4. Self-destroying seal mark

KFN-TM:

Access to conductor plate:

- Remove seal •
- Open display unit •
- The application of the display unit as a weighing system able to be verified • requires that the contacts of the circuit board are short-circuited with the help of a jumper [K1]. For non verifiable weighing systems remove the jumper.
- To adjust, short-circuit the contacts of the circuit board, using a jumper [K2]. •

English

Operation 7

7.1 Start-up

 \Rightarrow Press $\stackrel{(n)}{\text{OFF}}$ and the instrument will carry out a self-test. As soon as the weight display appears, the instrument will be ready to weigh.

7.2 Switching Off

 \Rightarrow Press $\stackrel{(n)}{\longrightarrow}$ and the display will disappear.

7.3 Zeroing

Resetting to zero corrects the influence of light soiling on the weighing plate. The unit is equipped with an automatic zero setting function. Therefore the unit can be reset to zero at any time as follows:

 \Rightarrow To unload the weighing system

 \Rightarrow Press and zero display as well as indicator **ZERO** will appear.

7.4 Simple weighing

- \Rightarrow Place goods to be weighed on balance.
- ⇒ Wait until stability display **STABLE** appears.
- \Rightarrow Read weighing result.

Overload warning

Overloading exceeding the stated maximum load (max) of the device, minus a possibly existing tare load, must be strictly avoided. This could damage the instrument.

Exceeding maximum load is indicated by the display of "----" and an audio sound. Unload weighing system or reduce preload.

7.5 Switch-over weighing unit (only not verifiable weighing systems)

How to enable weighing units:

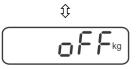

- ⇒ Call-up menu item P5 Unt, see chap. 8.1
- Press and the first weighing unit with the current setting will be displayed.
- ⇒ To enable [on] / disable [off] the displayed weighing unit,
- Acknowledge with Acknowle
- ➡ To enable [off] / disable [on] the displayed weighing unit, press
- \Rightarrow Acknowledge with
- ➡ Repeat sequence for each weighing unit. Note:
 - "tj" and "Hj" cannot be activated at the same time, only either \ldots or \ldots .
- \Rightarrow Return to weighing mode using

Switch-over weighing unit:

Keep pressed, the display changes over to the weighing units activated before (e.g. kg ≒ lb)

➡ Deposit weighing vessel. After successful standstill control press the button. Zero display and indicator NET appear.

The weight of the container is now internally saved.

- \Rightarrow Weigh the material, the net weight will be indicated.
- ⇒ The weight of the weighing container will be displayed as a minus number after removing the weighing container.
- ⇒ The tare procedure can be repeated as many times as necessary, for example with initial weighing of several components for a mix (add-on weighing). The limit is reached when the taring range capacity (see type plate)is full.
- \Rightarrow To change between gross weight and net weight, press
- \Rightarrow To delete the tare value, remove load from weighing plate and press \mathbf{x} .

7.7 Weighing with tolerance range

You can set an upper or lower limit when weighing with tolerance range and thus ensure that the weighed load remains exactly within the set limits. During tolerance tests such as dosing, portioning and sorting the unit will indicate exceeded or undershot limits by emitting an optical or acoustic signal.

Audio signal:

The acoustic signal depends on the settings in menu block "BEEP". Options:

- no Acoustic signal turned off
- ok An acoustic signal sounds when load is within tolerance limits
- ng An acoustic signal sounds when load is beyond tolerance limits

Optical signal:

Three colour signal lights indicate whether the load is within the two tolerance limits. The signal lights provide the following information:

	+	Goods to be weighed above tolerance limit	Red signal light glowing
• •	✓	Goods to be weighed within tolerance range	Green signal light glowing
-	-	Goods to be weighed below tolerance limit	Red signal light glowing

The settings for tolerance weighing may be called up either via menu block **"P0 CHK**" (see chap. 8) or faster via the key combination

English

7.7.1 Tolerance check for target weight

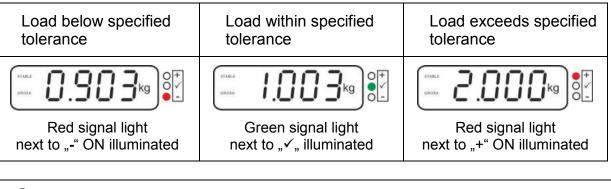

Press region : weighing system is in tolerance weighing mode.
 From here evaluation takes place whether the goods to be weighed are within the two tolerance limits.

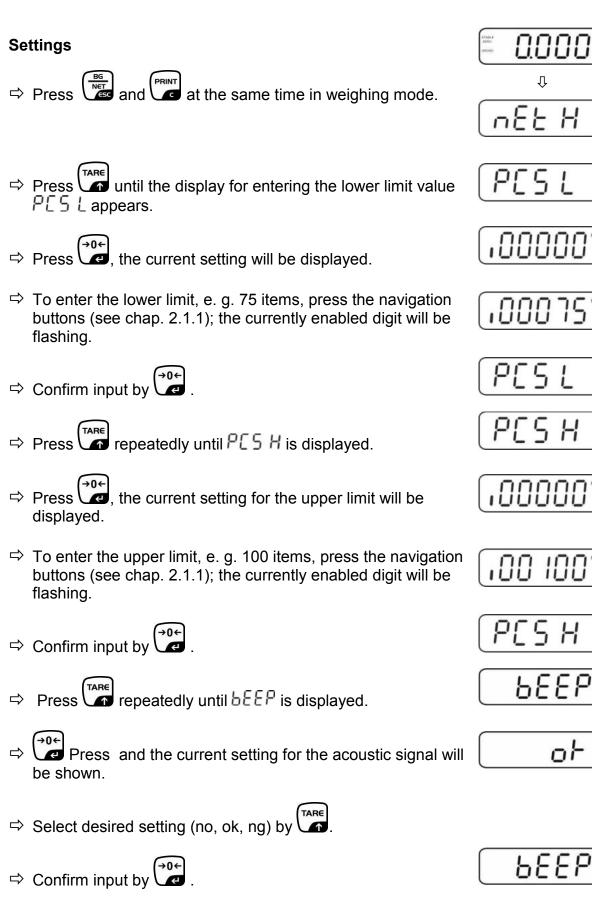

Weighing with tolerance range

- \Rightarrow Tare when using a weighing container.
- Put on goods to be weighed, tolerance control is started. The signal lights indicate whether the load is within the two set limits.

- The tolerance control is not active when the weight is under 20d.
 - To delete limits, enter "00.000 kg".

7.7.2 Tolerance check for target quantity

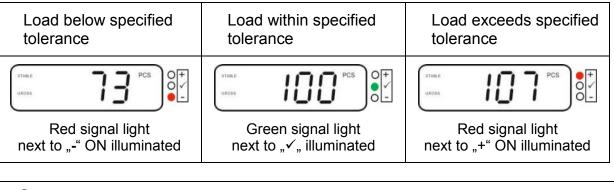

Press region : weighing system is in tolerance weighing mode.
 From here evaluation takes place whether the goods to be weighed are within the two tolerance limits.

Weighing with tolerance range

- \Rightarrow Set item weight, see chap. 7.10.
- \Rightarrow Tare when using a weighing container.
- Put on goods to be weighed, tolerance control is started. The signal lights indicate whether the load is within the two set limits.

- The tolerance control is not active when the weight is under 20d.
 - To delete limits, enter "00000 PCS".

With this function the individual weighing values are added into the summation

memory by pressing and edited, when an optional printer is connected.

- Menu setting:
 - "P1 COM" or "P2 COM" ⇔ "MODE" ⇔ "PR2"", see chap. 8
- The totalizing function is not active when the weight is under 20d.

Add up:

 \Rightarrow Place weighing goods A.

Wait until the stability display **STABLE** appears, then press . The weight value will be saved and printed if an optional printer is connected.

10281.8	Π		Ē	1	
86050	Ъ	L	L	i	
	55 3	_	_	 22	M+

Remove the weighed good. More weighed goods can only be added when the display ≤ zero.

 \Rightarrow Place goods to be weighed B.

Wait until the stability display appears, then press . Weighing value will be added to summation memory and possibly printed.

The number of weighing actions, followed by the total weight will be displayed for 2 sec.

Add more weighed goods as described before. Please note that the weighing system must be unloaded between the individual weighing procedures.

⇒ This process may be repeated 99 times or till such time as the capacity of the weighing system has been exhausted.

Display and output sum "Total":

 \Rightarrow Press , number of weighing, followed by the total weight will be displayed for

2 sec. Press 🕼 to print out this display.

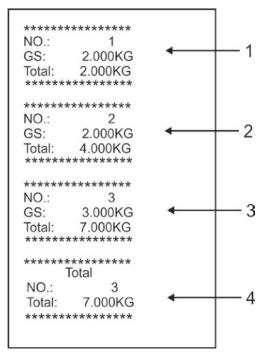

Delete weighing data:

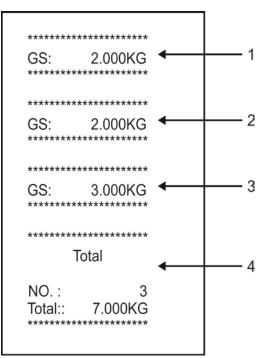

Press and at the same time The data in the summation memory are deleted.

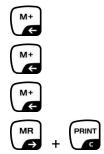

Printout example KERN YKB-01N, verified weighing system:

Menu setting "P1 COM" or "P2 COM" ⇔ "Lab 2" / Prt 7"

- 1 First weighing
- 2 Second weighing
- 3 Third weighing
- 4 Number of weighings / total

Menu setting "P1 COM" or "P2 COM" ⇔ "Lab 0" / Prt 0"

7.9 Automatic adding-up

With this function the individual weighing values are automatically added into the

summation memory when the balance is unloaded without pressing and edited, when an optional printer is connected.

 Menu settings: "P1 COM" or "P2 COM ⇒ "MODE" ⇒ "AUTO"", see chap. 8 Der Indikator AUTO wird angezeigt.

Add up:

Place weighing goods A. After the standstill control sounds a signal tone. The weighing value will be added to the summation memory and printed.

Remove the weighed good. More weighed goods can only be added when the display ≤ zero.

Place goods to be weighed B. After the standstill control sounds a signal tone. The weighing value will be added to the summation memory and printed. Number of weighing, followed by the total weight will be displayed for 2 sec.

- Add more weighed goods as described before. Please note that the weighing system must be unloaded between the individual weighing procedures.
- ⇒ This process may be repeated 99 times or till such time as the capacity of the weighing system has been exhausted.

7.10 Parts counting

Before the balance can count parts, it must know the average part weight (i.e. reference). Proceed by putting on a certain number of the parts to be counted. The balance determines the total weight and divides it by the number of parts, the so-called reference quantity. Counting is then carried out on the basis of the calculated average piece weight.

As a rule:

The higher the reference quantity the higher the counting exactness.

- ⇒ In weighing mode , press and hold until the message "P
 10" appears that is used to set the reference quantity.
- ➡ Use to set the desired reference quantity (such as 100), options include P 10, P 20, P 50, P100, P 200.
- ⇒ Place as many items to be counted (such as 100 items) as

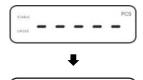

demanded by the set reference quantity and confirm by The weighing scales calculate the reference weight. The current quantity (such as 100 items) will be displayed.

- ➡ Remove reference weight. The balance is from now in parts counting mode counting all units on the weighing plate.
- \Rightarrow Back to Weighing mode by

KFB/KFN-TM-BA IA-e-1624

→0←

7.11 Animal weighing

The animal weighing function is suitable for weighing restless loads. The weighing system will display a mean value derived from several weighing results.

The animal weighing program can be enabled by either calling up menu block **"P3 OTH"** or **"P4 OTH"** ⇔ **"ANM"** ⇔ **"ON"** (See chap. 8) or faster via key combination.

The indicator shows HOLD as long as the animal weighing function remains enabled.

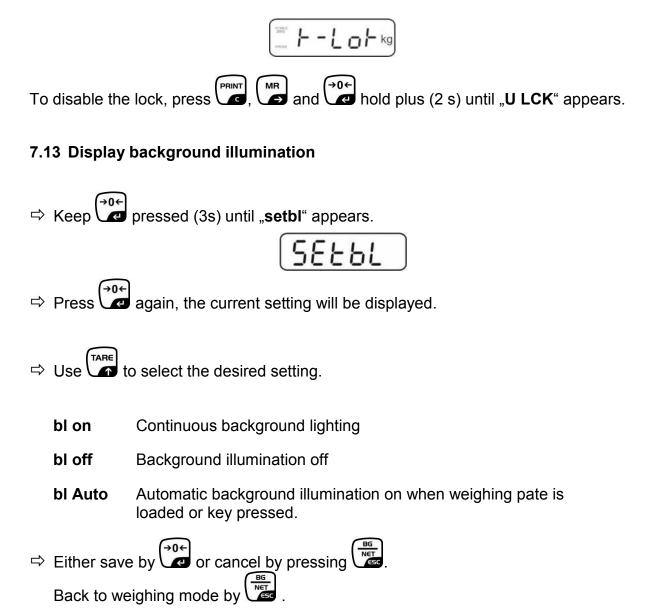

- \Rightarrow Place the load on the weighing system and wait until the scale is steady.
- Press and at the same time; you will hear an acoustic signal, indicating that the animal weighing function is enabled.
 Whilst averaging is taking place you can add or remove loads as the measuring value will be constantly updated.
- \Rightarrow To deactivate the animal weighing function press and \Rightarrow and \Rightarrow at the same time.

7.12 Lock keyboard

To enable/disable the keyboard lock go to menu item **"P3 OTH" or "P4 OTH"** \Rightarrow **"LOCK"**, see chap.8.

Whilst the function is enabled the keyboard will self-lock after no key has been pressed for 10 minutes. **"K-LCK**" will be displayed as soon as a key is pressed.

7.14 Automatic switch-off function "AUTO OFF"

The unit is automatically switched off within the preset time when the display unit or the weighing bridge are not operated.

 \Rightarrow Keep ressed (3s) until "**setbl**" appears.

Press to call up **AUTO OFF**-function

- \Rightarrow Press $\textcircled{}^{0}$, the current setting will be displayed.
- \Rightarrow Use to select the desired setting.
- of 0 AUTO OFF - function disabled
- of 3 Weighing system will be turned off after 3 min.
- of 5 Weighing system will be turned off after 5 min.
- of 15 Weighing system will be turned off after 15 min.
- of 30 Weighing system will be turned off after 30 min.
- \Rightarrow Either save by $\textcircled{P}{ \textcircled{P}{ \textcircled{P}{ \textcircled{P}{ \textcircled{P}{ \textcircled{P}{ \hline P}} } }}} or cancel by pressing <math>\textcircled{P}{ \textcircled{P}{ \textcircled{P}{ \textcircled{P}{ \textcircled{P}{ \textcircled{P}{ \textcircled{P}{ \textcircled{P}{ \hline P}} } } }}}$ Back to weighing mode by

8 Menu

The application of the display unit as a verified weighing system requires that you short-circuit the two contacts [K1] of the circuit board, using a jumper. To that effect, a menu for verified weighing systems is available. For menu layout see chap. 8.2. There is no jumper for weighing systems that cannot be verified. To that effect, a menu is available for weighing systems that cannot be verified, Menu layout see chap. 8.1

Navigation in the menu:

Call up menu	 ⇒ Switch-on balance and during the selftest press . Press M*, Es, Take subsequently, the first menu block "PO CHK" will be displayed. POCHH
Select menu block	➡ With help of , the individual menu items can be selected one after the other.
Select setting	➡ Confirm selected menu item by pressing ■. The current setting will be displayed.
Change settings	➡ To change to the available settings, press the navigations keys as described in chap. 2.1.
Acknowledge setting / exit the menu	\Rightarrow Either save by pressing \checkmark or cancel by pressing \checkmark
Return to weighing mode	⇒ Press repeatedly to exit menu.

8.2 Overview verified weighing systems (contacts of circuit board [K1] short-circuited by means of jumper)

In verified weighing systems the access to "P2 mode and "P4 tAr" is locked.

KERN KFB-TM:

To disable the access lock, destroy the seal and actuate the adjustment switch. Position of the adjustment switch see chap. 6.11.

KERN KFN-TM:

In order to unlock the access, the seal must be destroyed and both contacts of the printed circuit board [K2] must be short-circuited by a jumper, see chap. 6.11.

Attention:

After destruction of the seal the weighing system must be re-verified by an authorised agency and a new verification wire/seal mark fitted before it can be reused for applications subject to verification.

9 Service, maintenance, disposal

9.1 Clean

- Before cleaning, disconnect the appliance from the operating voltage.
- Do not use aggressive detergents (solvents or similar).

9.2 Service, maintenance

The appliance may only be opened by trained service technicians who are authorized by KERN.

Before opening, disconnect from power supply.

9.3 Disposal

Disposal of packaging and appliance must be carried out by operator according to valid national or regional law of the location where the appliance is used.

9.4 Error messages

Error message	Description	Possible causes
	Maximum load exceeded	 Unload weighing system or reduce
ol		preload.
Err 1	Incorrect data input	Follow format "yy:mm:dd"
Err 2	Incorrect time entry	Follow format "hh:mm:ss"
Err 4	Zeroing range exceeded due to switching-on balance or pressing (normally 4% max)	Object on the weighing plateOverload when zeroing
Err 5	Keyboard error	
Err 6	Value outside the A/D changer range	Weighing plate not installedDamaged weighing cellDamaged electronics
Err 9	Stability display does not appear	Check the environmental conditions.

Err 10	Communication error	No data
Err 15	Gravitation error	• Range 0.9 ~ 1.0
Err 17	Taring range exceeded	Reduce load
Failh/ Faill	Adjustment error	Repeat adjustment.
Err P	Printer error	Check communication parameters
Ba lo / Lo ba	Battery very low	Recharge battery

Should other error messages occur, switch balance off and then on again. If the error message remains inform manufacturer.

10 Data output RS 232C

You can print weighing data automatically via the RS 232C interface or manually by

pressing via the interface according to the setting in the menu.

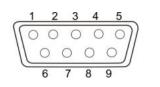

This data exchange is asynchronous using ASCII - Code.

The following conditions must be met to provide successful communication between the weighing system and the printer.

- Use a suitable cable to connect the display unit to the interface of the printer. Faultless operation requires an adequate KERN interface cable.
- Communication parameters (baud rate, bits and parity) of display unit and printer must match. For a detailed description of interface parameters see chap. 8, menu block "P1 COM" or ,"P2 COM"

11 Instant help

In case of an error in the program process, briefly turn off the display unit and disconnect from power supply. The weighing process must then be restarted from the beginning.

Help:

Possible cause

The displayed weight does not glow.

- The display unit is not switched on.
- Mains power supply interrupted (mains cable defective).
- Power supply interrupted.
- (Rechargeable) batteries are inserted incorrectly or empty
- No (rechargeable) batteries inserted.

The displayed weight is permanently changing

- Draught/air movement
- Table/floor vibrations
- Weighing pan has contact with other objects.
- Electromagnetic fields / static charging (choose different location/switch off interfering device if possible)

The weighing result is obviously incorrect

- The display of the balance is not at zero
- Adjustment is no longer correct.
- Great fluctuations in temperature.
- Warm-up time was ignored.
- Electromagnetic fields / static charging (choose different location/switch off interfering device if possible)

Should other error messages occur, switch display unit off and then on again. If the error message remains inform manufacturer.

12 Installing display unit / weighing bridge

1

 Installation / configuration of a weighing system must be carried out by a well acquainted specialist with the workings of weighing balances.

12.1 Technical data

Supply voltage:	5 V/150mA
Max. signal voltage	0-10 mV
Zeroing range	0-2 mV
Sensitivity	2-3 mV/V
Resistance parameter	80 - 100 Ω, max 4 items per 350 Ω load cell

12.2 Weighing system design

The display unit is suitable for connection to any analogue platform in compliance with the required specifications.

The following data must be established before selecting a weighing cell:

Weighing balance capacity

This usually corresponds to the heaviest load to be weighed.

Preload

This corresponds to the total weight of all parts that are to be placed on the weighing cell such as upper part of platform, weighing pan etc.

• Total zero setting range

This is composed of the start-up zero setting range $(\pm 2\%)$ and the zero setting range available to the user via the ZERO-key (2%). The total zero setting range equals therefore 4 % of the scale's capacity.

The addition of weighing scales capacity, preload and the total zero setting range give the required capacity for the weighing cell. To avoid overloading of the weighing cell, include an additional safety margin.

Smallest desired display division

• Verifiability, if required

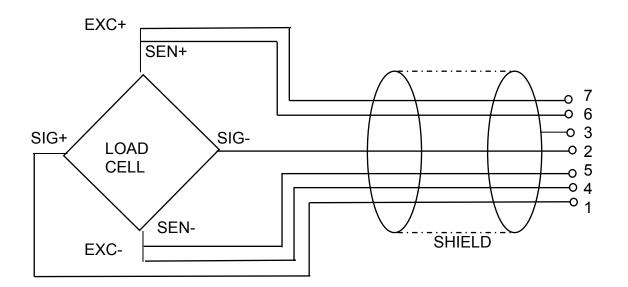

The application of the display unit as a verified weighing system requires that you short-circuit the two contacts [K1] of the circuit board, using a jumper; for position see chap. 6.11.

Remove the jumper for weighing systems not able to be verified.

12.3 How to connect the platform

- \Rightarrow Disconnect the display unit from the power supply.
- Solder the individual leads of the load cell cable onto the circuit board. See diagrams below.

PIN	Loadcell		
	6- conductor	4- conductor	
7	EXC+	EXC+	$\begin{pmatrix} 3 \\ \end{pmatrix} \begin{pmatrix} 4 \\ \end{pmatrix}$
6	SEN+		5
5	EXC-	EXC-	S++0 Q O+-E
4	SEN-		
3	SHIELD	SHIELD	S+ 1 6 E-
2	SIG-	SIG-	77
1	SIG+	SIG+	

12.4 Configure display unit

12.4.1 Verified weighing systems (contacts of circuit board [K1] short-circuited by means of jumper)

For menu overview see chap. 8.2.

In verified weighing systems the menu item for calibration "P2 mode" is blocked.

KERN KFB-TM:

To disable the access lock, destroy the seal and actuate the adjustment switch. Position of the adjustment switch see chap. 6.11

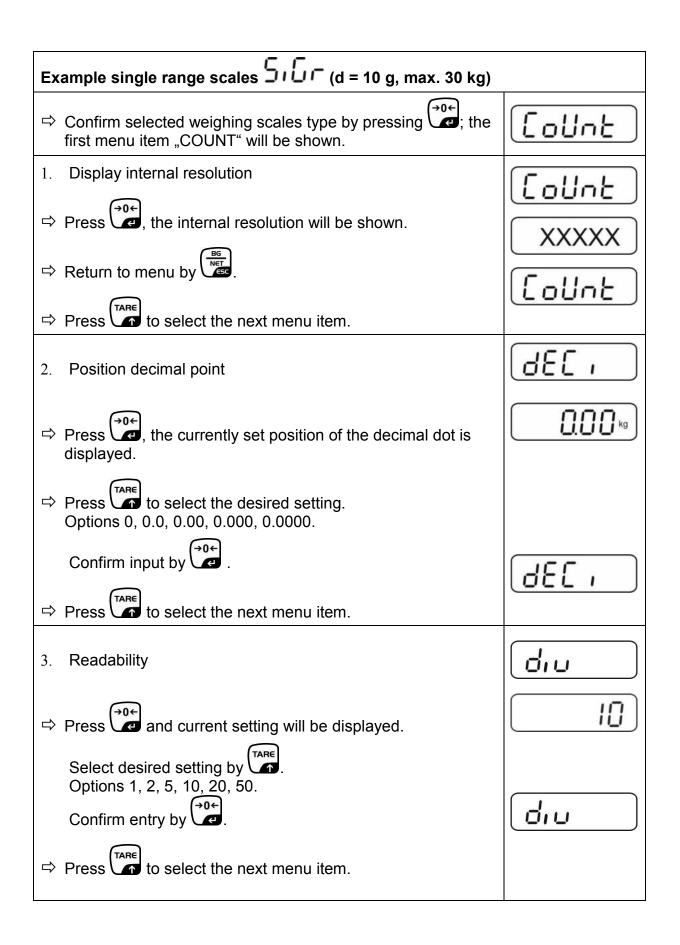

KERN KFN-TM:

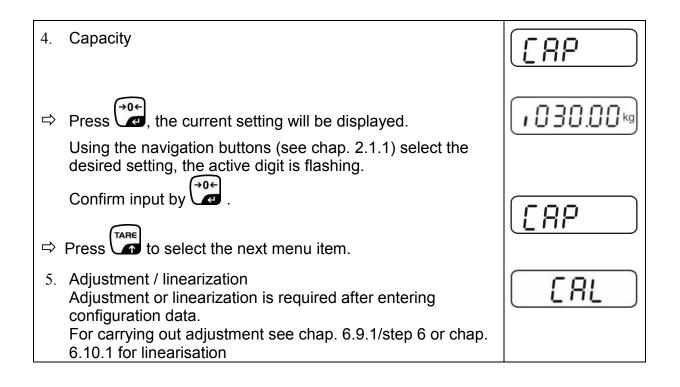

To override the blocked access you will have to destroy the seal before calling up the menu and to short-circuit the two contacts on the circuit board [K2], using a jumper (See chap. 6.11).

Attention:

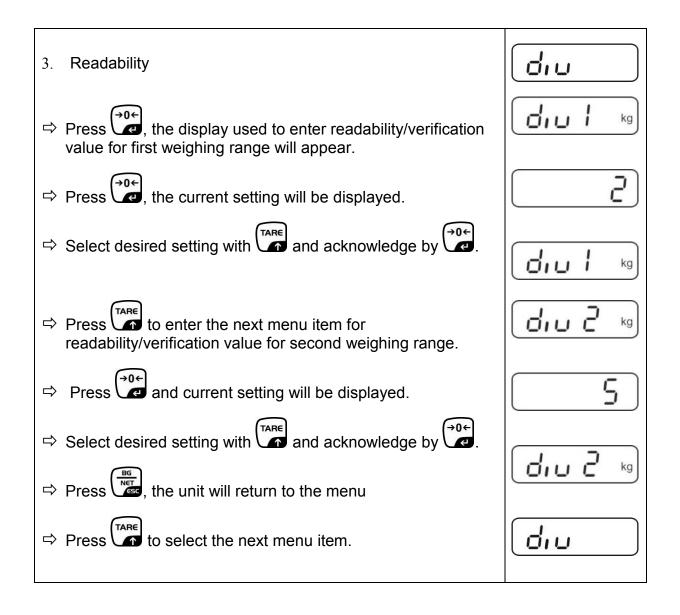

After destruction of the seal the weighing system must be re-verified by an authorised agency and a new verification wire/seal mark fitted before it can be reused for applications subject to verification.

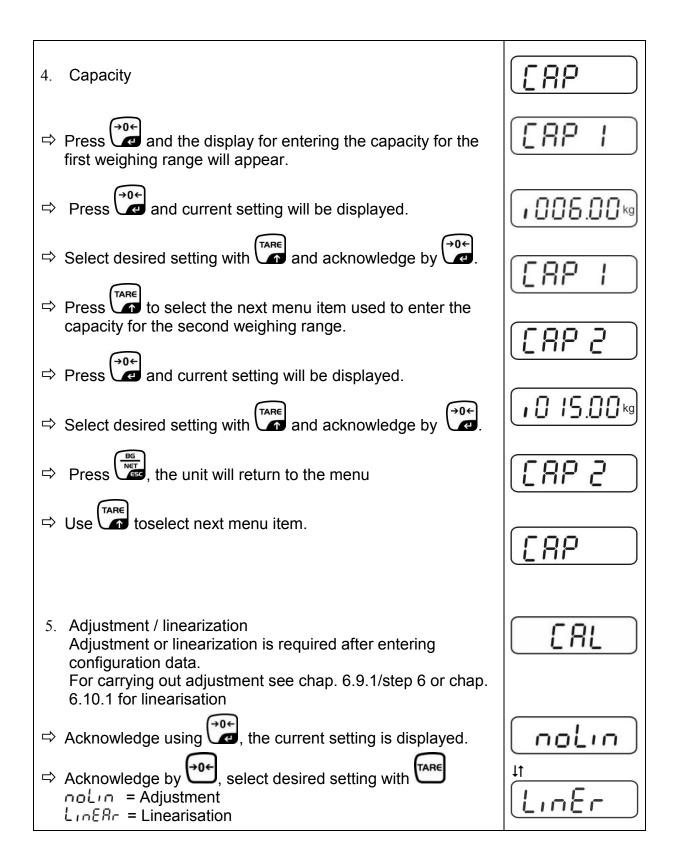

Call up menu: ⇒ Switch-on balance and during the selftest press	(Pn
Press , , , Stare subsequently, the first menu block "PO CHK" will be displayed.	POCHF
 Press repeatedly until "P2 mode" will be displayed. Operate the adjustment switch (models KFB-TM). 	(P2ñod)
 ⇒ Press and use and use to select the weighing scales type. Single-range balance URL I Dual range balance URL 2 Multi-interval balance 	SiGr

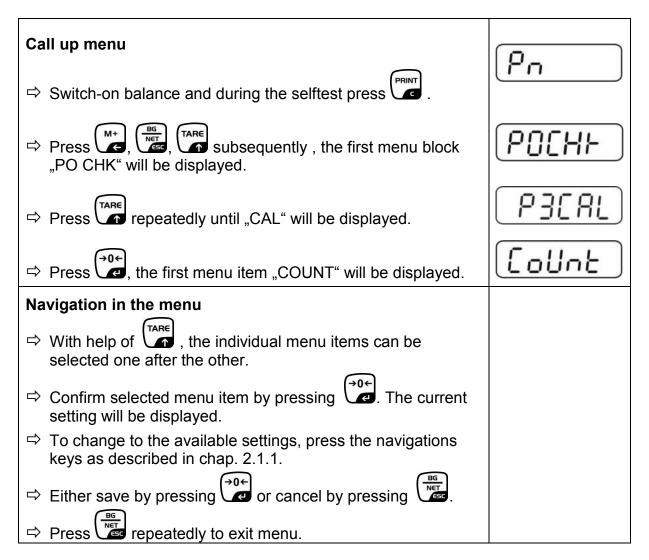

Example dual range scales	15 kg)
➡ Confirm selected weighing scales type by , the first menu item "COUNT" will be shown.	[ollnt]
1. Display internal resolution	[oline]
\Rightarrow Press $\textcircled{2}$, the internal resolution will be shown.	
⇒ Return to menu by	Collne
\Rightarrow Press to select the next menu item.	
2. Position decimal point	665 1
Press , the currently set position of the decimal dot is displayed.	0.00 kg
$\Rightarrow Use \qquad \textbf{TARE} \\ \textbf{Options 0, 0.0, 0.00, 0.000, 0.0000.} $	
Confirm input by	
\Rightarrow Press to select the next menu item.	

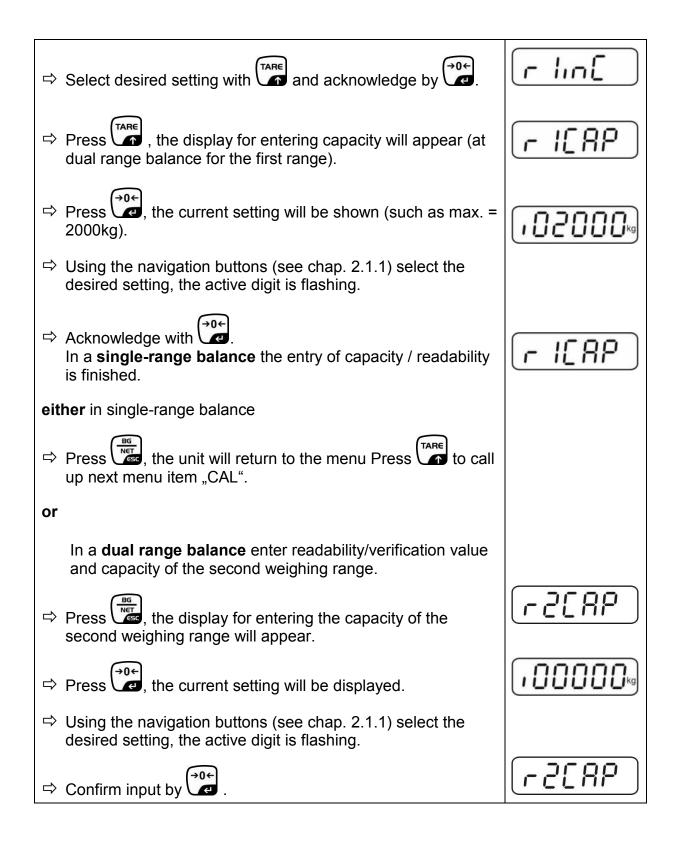

12.4.2 Non verifiable weighing systems (contacts of circuit board [K1] not short-circuited)

For menu overview see chap. 8.1.

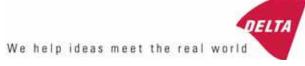

Parameter selection	
1. Display internal resolution	Collne
\Rightarrow Press $\textcircled{\begin{subarray}{c} \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \$	XXXXX
⇔ Return to menu by	[ollnt]
⇒ Use to select another menu item.	
2. Position decimal point	dec ,
Press , the currently set position of the decimal dot is displayed.	(
To make changes using the navigation keys (See chap. 2.1.1), select the desired setting. Options 0, 0.0, 0.00, 0.000, 0.0000.	
Confirm input by .	666 '
⇒ Use to select another menu item.	
3. Weighing scales type, capacity and readability	GUAL
Press and current setting will be displayed.	off
\Rightarrow Select desired setting by $\mathbf{T}_{\mathbf{A}\mathbf{R}\mathbf{E}}$.	
"off" Single-range balance "on" Dual range balance	
 Press to confirm, the display for entering readability (for dual range scales for the first weighing range) appears. 	r III
⇒ Press , the current setting will be displayed.	[]

Press , the display for entering the readability of the second weighing range will appear.	[r2 in[]
\Rightarrow Press, the current setting will be displayed.	
\Rightarrow Select desired setting with and acknowledge by e^{0} .	[r2 in[]

TEST CERTIFICATE No. DK0199-R76-11.04

Instrument type	KFN-TM / KFB-TM		
Test item device	Non-automatic Weighing Ind	dicator	
Issued by	DELTA Danish Electronic EU - Notified Body No. 019		
In accordance with	Paragraph 8.1 of the Europea of non-automatic weighing i	an Standard on metrological aspects nstruments EN 45501:1992.	
Fractional factor (p _i)	0.5 (refer to 3.5.4 of the stan	dard).	
Issued to	Kern & Sohn GmbH Ziegelei 1 D 72336 Balingen-Frommer GERMANY	rn	
Manufacturer	Kern & Sohn GmbH		
In respect of	A family of indicators tested	as a module of a weighing instrument.	
Characteristics	characteristics: Self indicating with Accuracy class Verification scale interval: Maximum number of		DELTA Danish Electronics, Light & Acoustics
Description and documentation Remarks	The A/D device is described this certificate. Summary of tests involved: S	and documented in the annex to See test report no. DANAK-	Venlighedsvej 4 2970 Hørsholm Denmark
	1910568, DANAK-1910388	and NMi 709226. approval certificate without permis-	Tel. (+45) 72 19 40 00 Fax (+45) 72 19 40 01 www.delta.dk

The annex comprises 7 pages.

2011-03-16 Issued on

VAT No. DK 12275110

1. Name and type of instrument

The indicators KFN-TM / KFB-TM are a family of weighing indicators suitable to be incorporated in non-automatic weighing instruments, class III or class IIII, with single-interval, multi-interval or multi-range.

2. Description of the construction and function

2.1 Construction

The electronic indicator consists of a single circuit board, SMD populated on both sides as the A/Dinterface circuits, the microprocessor and the voltage regulation are placed on one side and the LCD display on the other side.

The LCD-display has indication for: Stable, zero, gross, net, tare, and weight unit (kg, g, t), and $5\frac{1}{2}$ digits with a height of 52 mm.

The enclosure is made of stainless steel for the KFN-TM indicator or of ABS plastics for KFB-TM.

The front of the enclosure has an on/off key plus 6 keys for operating the functions of the indicator.

All instrument calibration and metrological setup data are stored in the non-volatile memory.

The indicators are power supplied with 9 - 12 VDC - normally supplied by external 230 VAC to 9 - 12 VDC adapter. An optional internal battery can be factory installed.

As part of the indicators EMC protection ferrites shall be placed as follows:

- Externally around the DC supply cable near its connection to the indicator (min. 1 turn).
- Internal on cable between power plug and main board (4 turns).
- Internal on cable between load cell connector and main board (min. 2 turns).

Software

The software version is displayed during the start-up of the indicator. The tested software version is 1.07.

Sealing

The configuration and calibration data can only be changed if the calibration jumper is installed on the circuit board.

2.2 Function

The devices are a microprocessor based electronic weighing indicators for connection of strain gauge load cells.

List of devices:

- Self test
- Determination and indication of stable equilibrium
- Initial zero-setting $\pm 10\%$ of Max
- Semi-automatic zero-setting $\pm 2\%$ of Max
- Automatic zero-tracking $\pm 2\%$ of Max

- Indication of zero
- Semi-automatic subtractive tare
- Acting upon significant fault
- Weighing unstable samples
- Real time clock (optional)

3. Technical data

3.1 Indicator	
Туре	KFN-TM / KFB-TM
Accuracy class	III or IIII
Weighing range	Single-interval, multi-interval or multi-range
Maximum number of verification scale intervals (n)	6000 for single-interval
	2×3000 for multi-interval and multi-range, however limited to 1000 for Class IIII
Minimum input voltage per VSI	1 μV
Maximum capacity of interval or range (Max _i):	$n_i imes e_i$
Verification scale interval, $e_i =$	Max_i / n_i
Initial zero-setting range:	± 10 % of Max
Maximum tare effect:	100 % of Max
Fractional factor (pi)	0.5
Excitation voltage	5 VDC
Circuit for remote sense	Active, (see below)
Minimum input impedance	87 ohm
Maximum input impedance	1600 ohm
Connecting cable to load cell(s):	See Section 3.1.1
Supply voltage:	9 - 12 VDC 230 VAC using external Vac/2Vdc adapter
Operating temperature range	$Min / Max = -10 \ ^{\circ}C / +40 \ ^{\circ}C$
Peripheral interface(s)	See Section 4

3.1.1 Connecting cable between the indicator and the junction box for load cell(s), if any

3.1.1.1 4-wire system

Line Maximum length 4 wires, shielded The certified length of the load cell cable, which shall be connected directly to the indicator.

3.1.1.2 6-wire system

Line Maximum length Maximum resistance per wire 6 wires, shielded 227 m/mm² 3.8 ohm

4. Interfaces

4.1 Load cell interface

Refer to section 3.1.1.

Any load cell(s) can be used for instruments under this certificate provided the following conditions are met:

- There is a respective test certificate (EN 45501) or an OIML Certificate of Conformity (R60) issued for the load cell by a Notified Body responsible for type examination under the Directive 2009/23/EC.
- The certificate contains the load cell types and the necessary load cell data required for the manufacturer's declaration of compatibility of modules (WELMEC 2, Issue 5, 2009, section 11), and any particular installation requirements. A load cell marked NH is allowed only if humidity testing to EN 45501 has been performed.
- The compatibility of load cells and indicator is established by the manufacturer by means of the compatibility of modules form, contained in the above WELMEC 2 document, or the like, at the time of EC verification or declaration of EC conformity of type.
- The load transmission must conform to one of the examples shown in the WELMEC 2.4 Guide for load cells.

4.2 Peripheral interfaces

The indicator may be equipped with one or more of the following protective interfaces that have not to be secured.

- RS-232C
- Analogue output (0 10 V / 4 20 mA)
- Digital output
- Blue Tooth

The peripheral interfaces are characterised "Protective interfaces" according to paragraph 8.4 in the Directive.

5. Conditions for use

Legal use of the indicator for automatic weighing or as counting device is not allowed with reference to this test certificate.

6. Location of seals and inscriptions

Seals shall bear the verification mark of a notified body or alternative mark of the manufacturer according to ANNEX II, section 2.3 of the Directive 2009/23/EC. The seals shall be placed so that the enclosure can not be opened.

Location of CE mark of conformity:

The CE mark of conformity is placed on the overlay on the rear side of the device.

Inscription on the overlay:

Type, accuracy class, Temp. -10 °C / +40 °C, Certificate No. DK0199-R76-11.04.

Other inscriptions on the overlay:

Manufacturer's name and/or logo, Part No, Supply voltage.

7. Tests

The indicator has been tested according to EN 45501 and WELMEC 2.1 Guide for testing of indicators.

Examination / tests
Temperature tests: 20 / 40 / -10 / 5 / 20 (tested at minimum input-voltage sensitivity)
Temperature effect on no-load indication (tested at minimum input-voltage sensitivity)
Stability of equilibrium
Repeatability
Warm-up time
Voltage variations
Short time power reductions
Electrical bursts
Electrostatic discharges
Immunity to radiated electromagnetic fields
Damp heat, steady state
Span stability
Checklist
Maximum load cell cable length and impedance of cable to load cell
Load cell interface measurements with interruptions of the sense circuit

Examination / tests

The test item fulfilled the maximum permissible errors at all tests.

8. Documentation

Contents of the technical documentation held by the notified body:

8.1 **Product specification**

- Manuals and descriptions
- Drawings
- Etc.

8.2 Examination report

OIML R76 report no. DANAK-1910568, DANAK-1910388 and NMi 709226.

8.3 Test results

Report no. DANAK-1910568, DANAK-1910388 and NMi 709226.

9. Pictures

Figure 1 Sealing of KFN-TM.

After remove the label, you will find VOID on housing, or a self destroyable sticker/seal shall be used.

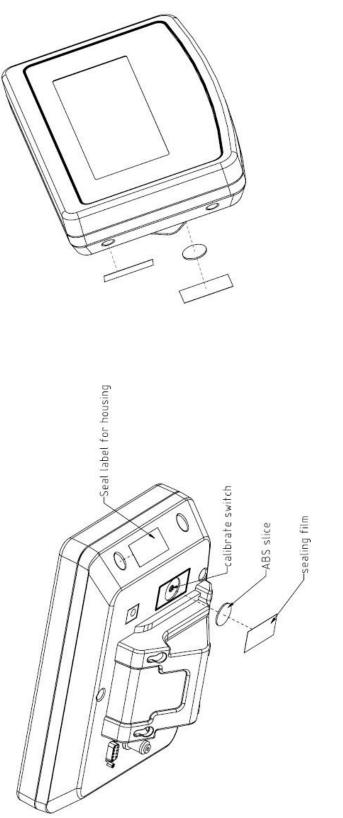

Figure 2 Sealing of KFB-TM.
