Speed sensors

# SITRANS WS300

# Overview

SITRANS WS300 is a low- to high-resolution shaft-driven speed sensor.

### Benefits

- Compact and economical
- Easy, low-cost installation
- Accurate belt speed detection
- Optional resolutions for measurement over a range of belt speeds
- · Corrosion resistant

### Application

SITRANS WS300 speed sensor operates in conjunction with a conveyor belt scale, providing a signal to an integrator which computes the rate of material being conveyed. At only 1.22 kg (2.68 lb), it is one of the lightest and most durable units ever developed for monitoring conveyor belt speed. With its rugged cast aluminum housing, it is suitable for outdoor installation, and its low weight prolongs bearing life.

It is directly coupled to a rotating tail or bend pulley shaft to ensure accurate belt-travel readout, eliminating problems caused by belt slippage or material build-up. The WS300 converts shaft rotation into a pulse train of 32, 256, 1 000, or 2 000 pulses per revolution using a high precision rotary optical encoder. The digital signal is transmitted as speed input to any Siemens integrator for calculation of belt speed, flow rate and totalized weight.

This low- to high-resolution speed sensor provides a frequency signal proportional to the shaft speed, enabling a range of speeds to be read accurately. The quadrature type shaft encoder prevents erroneous speed signals due to vibration or shaft oscillation. The WS300 is easily mounted and is bi-directional for either clockwise or counter-clockwise belt travel.

The IS version uses an inductive proximity switch detecting rotating targets.

Speed sensors

# Design

### Mounting

### Mounting to a Tail Pulley

### Notes:

Distance 'd' is the take-up travel on the tail pulley.

When adjusting the belt take-up, ensure that there is play on the arrestor rod. If the arrestor rod is pushed against the end of its travel slot, premature bearing wear may result.

### Mounting to a Bend or Snub Pulley

#### Notes:

When mounting to a bend or a snub pulley only, a 10 mm (0.39 inch) drilled hole is required for the arrestor rod.

### SITRANS WS300, dimensions in mm (inch)

### Mounting using optional threaded shaft coupling

### Dimensional drawings

WS300, dimensions in mm (inch)

### Circuit diagrams

### Connections (Standard)

| Description   | Terminal |
|---------------|----------|
| 10 30 V DC    | 1        |
| Speed out-CW  | 2        |
| Speed out-CCW | 3        |
| Common        | 4        |
| Ground        | GND      |

- Determine the pulley shaft rotation on the end of the pulley shaft to which the WS300 is attached.
- If the pulley shaft is rotating clockwise, connect the appropriate wire to terminal 2. If the pulley shaft is rotating counter-clockwise, connect the appropriate wire to terminal 3.
- Do not connect terminals 2 and 3 at the same time.
- Connection between the WS300 standard unit and the integrator should be made with three-wire shielded, 0.82 mm<sup>2</sup> (18 AWG) cable.
- Ground shield of cable at integrator only.
- Connect shield to appropriate terminal at the integrator.

### Terminal Connections to integrator

#### Connections (IS)

| Description  | Terminal |
|--|----------|
| 5 16 V DC, 25 mA max.<br>(from IS Switch Isolator) | 1        |
| Speed out  | 2        |
| Ground   | GND      |

- Only terminals 1 and 2 are required; rotation in a clockwise or counter-clockwise direction is not required.
- To connect the switch isolator, use two-wire shielded 0.324 mm<sup>2</sup> (22 AWG) cable. Use the same cable to connect the switch isolator to the integrator.
- · Ground shield of cable at integrator only.
- Connect shield to appropriate terminal at the integrator.
