### Legal information

### Warning notice system

This manual contains notices you have to observe in order to ensure your personal safety, as well as to prevent damage to property. The notices referring to your personal safety are highlighted in the manual by a safety alert symbol, notices referring only to property damage have no safety alert symbol. These notices shown below are graded according to the degree of danger.

#### **DANGER**

indicates that death or severe personal injury will result if proper precautions are not taken.

#### WARNING

indicates that death or severe personal injury may result if proper precautions are not taken.

#### CAUTION

indicates that minor personal injury can result if proper precautions are not taken.

#### NOTICE

indicates that property damage can result if proper precautions are not taken.

If more than one degree of danger is present, the warning notice representing the highest degree of danger will be used. A notice warning of injury to persons with a safety alert symbol may also include a warning relating to property damage.

#### **Qualified Personnel**

The product/system described in this documentation may be operated only by personnel qualified for the specific task in accordance with the relevant documentation, in particular its warning notices and safety instructions. Qualified personnel are those who, based on their training and experience, are capable of identifying risks and avoiding potential hazards when working with these products/systems.

### Proper use of Siemens products

Note the following:

### WARNING

Siemens products may only be used for the applications described in the catalog and in the relevant technical documentation. If products and components from other manufacturers are used, these must be recommended or approved by Siemens. Proper transport, storage, installation, assembly, commissioning, operation and maintenance are required to ensure that the products operate safely and without any problems. The permissible ambient conditions must be complied with. The information in the relevant documentation must be observed.

### **Trademarks**

All names identified by ® are registered trademarks of Siemens AG. The remaining trademarks in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owner.

### **Disclaimer of Liability**

We have reviewed the contents of this publication to ensure consistency with the hardware and software described. Since variance cannot be precluded entirely, we cannot guarantee full consistency. However, the information in this publication is reviewed regularly and any necessary corrections are included in subsequent editions.

Introduction

## 1.1 Purpose of this documentation

These instructions contain all information required to commission and use the device. Read the instructions carefully prior to installation and commissioning. In order to use the device correctly, first review its principle of operation.

The instructions are aimed at persons mechanically installing the device, connecting it electronically, configuring the parameters and commissioning it, as well as service and maintenance engineers.

## 1.2 Document history

The contents of these instructions are regularly reviewed and corrections are included in subsequent editions. We welcome all suggestions for improvement.

The following table shows the most important changes in the documentation compared to each previous edition.

Edition	Remarks
09/2021	Updated nameplate
	Updated safety notes
	Updated remote installation
	Updated technical specifications
	Updated coil resistance table
	Updated torque values
09/2012	Updated temperature specifications
	Updated coil resistance table
12/2011	General update
	Updated ATEX approval
06/2010	First edition
	The Operating Instruction replaces:
	MAG 3100 part of SITRANS F M HANDBOOK
	MAG 3100 part of SITRANS F M MAG 6000 I Ex d Operating Instructions
	MAG 3100 part of SITRANS F M MAG 6000 19" & Safety Barrier Operating Instructions
	MAG 3100 Instructions
	MAG 3100 with PTFE and PFA liners Instructions

### 1.6 Security information

## 1.3 Checking the consignment

- 1. Check the packaging and the delivered items for visible damages.
- 2. Report any claims for damages immediately to the shipping company.
- 3. Retain damaged parts for clarification.
- 4. Check the scope of delivery by comparing your order to the shipping documents for correctness and completeness.

#### **WARNING**

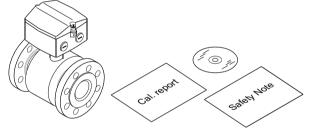

### Using a damaged or incomplete device

Risk of explosion in hazardous areas.

• Do not use damaged or incomplete devices.

## 1.4 Items supplied

- SITRANS F M MAG 3100
- Calibration report
- Siemens Process Instrumentation documentation disk containing certificates, and manuals
- Safety note

## 1.5 Designated use

Use the device in accordance with the information on the nameplate and in the Technical specifications (Page 55).

### NOTICE

#### Use in a domestic environment

This Class A Group 1 equipment is intended for use in industrial areas.

In a domestic environment this device may cause radio interference.

## 1.6 Security information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines and networks.

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens' products and solutions constitute one element of such a concept.

Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place.

For additional information on industrial security measures that may be implemented, please visit

https://www.siemens.com/industrialsecurity.

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customer's exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Security RSS Feed under

https://www.siemens.com/industrialsecurity.

### 1.7 Transportation and storage

To guarantee sufficient protection during transport and storage, observe the following:

- Keep the original packaging for subsequent transportation.
- Devices/replacement parts should be returned in their original packaging.
- If the original packaging is no longer available, ensure that all shipments are properly packaged to provide sufficient protection during transport. Siemens cannot assume liability for any costs associated with transportation damages.

### **NOTICE**

#### Insufficient protection during storage

The packaging only provides limited protection against moisture and infiltration.

• Provide additional packaging as necessary.

Special conditions for storage and transportation of the device are listed in Technical specifications (Page 55).

## 1.8 Notes on warranty

The contents of this manual shall not become part of or modify any prior or existing agreement, commitment or legal relationship. The sales contract contains all obligations on the part of Siemens as well as the complete and solely applicable warranty conditions. Any statements regarding device versions described in the manual do not create new warranties or modify the existing warranty.

### 1.8 Notes on warranty

The content reflects the technical status at the time of publishing. Siemens reserves the right to make technical changes in the course of further development.

Safety notes

### 2.1 Precondition for use

This device left the factory in good working condition. In order to maintain this status and to ensure safe operation of the device, observe these instructions and all the specifications relevant to safety.

Observe the information and symbols on the device. Do not remove any information or symbols from the device. Always keep the information and symbols in a completely legible state.

## 2.2 Warning symbols on the device

Symbol	Explanation
$\triangle$	Consult operating instructions

### 2.3 Laws and directives

### **General requirements**

Installation of the equipment must comply with national regulations.

### Instrument safety standards

The device has been tested at the factory, based on the safety requirements. In order to maintain this condition over the expected life of the device the requirements described in these Operating Instructions must be observed.

#### NOTICE

### Material compatibility

Siemens Flow Instruments can provide assistance with the selection of wetted sensor parts. However, the full responsibility for the selection rests with the customer and Siemens Flow Instruments can take no responsibility for any failure due to material incompatibility.

#### 2.3 Laws and directives

### **Conformity with European directives**

The CE marking on the device symbolizes the conformity with the following European directives:

Electromagnetic compatibility EMC imation of the European Parliament and of the Council on the approximation of the laws of the Member States relating to electromagnetic compatibility and repealing Directive 89/336/EEC.

Low voltage directive LVD 2006/95/EC Directive of the European Parliament and of the Council on the harmonisation of the laws of Member States relating to electrical equipment designed for use within certain voltage limits.

Pressure equipment directive PED Directive of the European Parliament and of the Council on the approximation of the laws of the Member States concerning pressure equipment.

- EMC Directive 2004/108/EC
- Low Voltage Directive (LVD) 2006/95/EC
- Pressure Equipment Directive (PED/DGRL) 93/23/EC
- ATEX Directive 94/9/EC
- MID Directive 2004/22/EC

### Compliance with PED directive

"Pressure Equipment Directive" (PED) is mandatory for all pressure equipment sold within the EU and EFTA.

Siemens Flow Instruments products comply with PED as stated in the following table.

Table 2-1 MAG 3100 PED Compliance

Flange mm	PN 6	PN 10	PN 16	PN25	PN 40	PN 63	PN 100	150 lb	300 lb	AWWA

Table 2-2 PED table key

SEP	Excluded from PED under SEP (Sound Engineering Practice)
PED	Product covered by PED and only available as fully PED-conforming
PED*	Product covered by PED but available as either conforming or non-conforming to PED
N/A	Size/pressure outside of PED scope or not available in the size range
N/A*	DN 1200 to DN 1400 only available non-conforming to PED

## **A** CAUTION

All products sold outside of EU and EFTA are excluded from the Pressure Equipment directive, also products sold into certain market sectors are excluded. These include

- 1. Meters used in networks for the supply, distribution and discharge of water.
- 2. Meters used in pipelines for the conveyance of any fluid from offshore to onshore.
- 3. Meters used in the extraction of petroleum or gas, including christmas tree and manifold equipment.
- 4. Any meter mounted on a ship or mobile offshore platform.

### 2.4 Installation in hazardous locations

#### WARNING

### Unsuitable device for the hazardous area

Danger of explosion.

• Only use equipment that is approved for use in the intended hazardous area and labelled accordingly.

### Hazardous area approvals

The device is approved for use in hazardous area and has the following approvals:

MAG 3100 Ex DN 350-2000:

- Ex e ia IIC T3-T6 Gb Ex tD A21 IP67 T\*°C (\* pipe temperature +5 K) (remote mounted)
- Ex d e [ia] ia IIC T3-T6 Gb Ex tD A21 IP67 T\*\*°C (\*\* pipe temperature +5 K, but not less than 85°C) (compact mounted)

MAG 3100 Ex DN 15-300:

- Ex de ia IIC T3-T6 Gb Ex tD A21 IP67 T\*°C (\* pipe temperature +13 K) (remote mounted)
- Ex de\* [ia] [ib] ia ib\* IIC T3-T6 Gb Ex tD A21 IP67 T\*\*°C (\*\* pipe temperature +13 K, but not less than 85°C) (compact mounted)
- \* The "e" and "ib" markings on the compact version are only applicable if the "Ex e" supply/data terminal chamber option is used.

### Note

### Approval scope

Make sure the hazardous area approval is suitable for the environment in which the device will be installed.

All approvals are based on non-flammable processes only!

### Intrinsically safe data

Table 2-3 Intrinsically safe data for MAG 3100 Ex remote mounted

Electrode circuit "ia" (Terminal 82,83)	
Ui	30 V
Li	2 μΗ
li	50 mA
Pi	0.5 W
Ci	50 nF

Coil circuit "Ex e" (Terminal 85,86)	
Ui	30 V (70 V peak)
li	130 mA

#### Note

### **Compact mounted versions**

For intrinsically safe data for MAG 3100 Ex compact mounted with MAG 6000 I Ex d, refer to the Operating Instructions of MAG 6000 I or to certificate number Sira 11ATEX2124X, available here: Certificates (<a href="http://www.siemens.com/processinstrumentation/certificates">http://www.siemens.com/processinstrumentation/certificates</a>).

### WARNING

### With intrinsically safe circuits

If a non-conforming supply unit is used, the "fail-safe" type of protection will no longer be effective and the approval certification will be invalid.

With intrinsically safe circuits, use only certified meters appropriate for the transmitter.

### Temperature specifications for Ex use

Table 2-4 Temperature classifications for MAG 3100 Ex (remote or compact with MAG 6000 I)

Maximum process fluid temperature [°C]	Temperature class	Ambient temperature [°C]
75	T6 (85 °C)	-25 to +60
90	T5 (100 °C)	-25 to +60
125	T4 (135 °C)	-25 to +60
180 (Remote configuration)	T3 (200 °C)	-25 to +60
150 (Compact configuration)	T3 (200 °C)	-25 to +50

For dust protection, the surface temperature is equal to the process fluid temperature plus 5 °C.

### Special conditions for safe use

It is required that:

- Electrical connections are in accordance with national requirements.
- Appropriate cable connectors are used for the output circuits:
  - Intrinsically safe: blue
  - Non-intrinsically safe: black
- Minimum 4 mm<sup>2</sup> cable is to be used for potential equalization
- Cable glands for coil circuit must be Ex e approved (increased safety) and fit the application by being approved for the cable used as regards size and temperature.

#### 2.4 Installation in hazardous locations

- Sensor insulation thickness is max. 100mm (only insulated sensors).
- IEC/EN 61241-14 and 61241-17 are considered for installation in areas with combustible dust.

#### WARNING

#### Potential equalization

In operation, the output is earthed through the conductive medium being measured and therefore potential equalization is necessary throughout the hazardous area.

The apparatus housing shall be connected to the potential equalizing conductor in the hazardous area.

#### **⚠** WARNING

#### External connections to Ex e terminals

The external connections to the Ex'e' Terminals of the Remote version shall comply with the following:

- The wire conductors shall have a cross-sectional area between 0.5 mm<sup>2</sup> and 2.5 mm<sup>2</sup>.
- No more than one single or multiple strand wire conductor shall normally be connected
  to each of the terminals. If multiple conductors are required, these shall be joined in a
  suitable manner, for example two conductors into a single insulated crimped boot lace
  ferrule.
- The insulation on the wire conductors shall extend to within 1 mm of the metal of the terminal throat.
- The terminal screws shall be tightened down with a torque between 0.5 Nm and 0.7 Nm.
- The terminals shall never be exposed to temperatures outside of the range -50°C to + 130°C; in addition, they shall only be installed and wired with cable in an ambient temperature of -10 to +80°C. Furthermore, in the event of there being a process temperatures of + 180°C in conjunction with an upper ambient temperature of +50°C the terminal strips should not be installed or wired with cable.

### **⚠** WARNING

### Explosive gas or dust

The terminal box shall not be opened when an explosive gas or dust atmosphere may be present.

### **WARNING**

#### Risk of explosion

Do **NOT** open the device while energized; otherwise there is a risk of explosion.

### Laying of cables

Cable for use in zone 1 and 2 or 21 and 22 must satisfy the requirements for having a proof voltage < AC 500 V applied between the conductor/ground, conductor/shield and shield/ground.

Connect the devices that are operated in hazardous areas as per the stipulations applicable in the country of operation, for example for Ex "d" and "nA", permanent cables must be laid.

### 2.5 Product documentation

Process instrumentation product documentation is available in the following formats:

- Certificates
- Downloads (firmware, EDDs, software)
- Catalog and catalog sheets
- Manuals

You have the option to show, open, save, or configure the manual.

- "Display": Open the manual in HTML5 format
- "Configure": Register and configure the documentation specific to your plant
- "Download": Open or save the manual in PDF format
- "Download as html5, only PC": Open or save the manual in the HTML5 view on your PC

You can also find manuals with the Mobile app at AUTOHOTSPOT. Download the app to your mobile device and scan the device OR code.

### Product documentation by serial number

Using the PIA Life Cycle Portal, you can access the serial number-specific product information including technical specifications, spare parts, calibration data, or factory certificates.

#### Entering a serial number

- 1. Open the AUTOHOTSPOT.
- 2. Select the desired language.
- 3. Enter the serial number of your device. The product documentation relevant for your device is displayed and can be downloaded.

To display factory certificates, if available, log in to the PIA Life Cycle Portal using your login or register.

#### Scanning a QR code

- 1. Scan the QR code on your device with a mobile device.
- 2. Click "PIA Portal".

### 2.5 Product documentation

To display factory certificates, if available, log in to the PIA Life Cycle Portal using your login or register.

### See also

Certificates (http://www.siemens.com/processinstrumentation/certificates)

Description

The main applications of the SITRANS F M electromagnetic flow sensors can be found in the following fields:

- Process industry
- · Chemical industry
- Steel industry
- Mining
- Utility
- Power generation & distribution
- Oil & gas / HPI
- Water & waste water
- Pulp & paper

### 3.1 System components

The SITRANS FM flowmeter system includes:

- Transmitter (types: SITRANS FM MAG 5000/6000 or MAG 6000 I)
- Sensor (types: SITRANS FM MAG 1100/1100 F, MAG 3100/3100 P or MAG 5100 W)
- Communication module (optional) (types: HART, PROFIBUS PA/DP, MODBUS RTU RS 485, Foundation Fieldbus H1, Devicenet)
- SENSORPROM memory unit

### **Communication solutions**

The SITRANS FM range of add-on modules, presently including HART, Foundation Fieldbus. MODBUS RTU RS 485, PROFIBUS PA / DP and Devicenet, are all applicable with the SITRANS FM MAG 6000 transmitter.

## 3.2 Design

SITRANS F M MAG 3100 is available in a wide range of sizes (DN 15 to DN 2000 ( $\frac{1}{2}$ " to 78")) and pressure ratings (PN 6 to PN 100 / ANSI Class 150 / 300, AS 2129 / AS 4087 - on request up to 690 bar (10 000 psi)). The fully welded construction provides a ruggedness that suits the toughest applications and environments.

Sensor housing and flanges are designed in carbon steel (ASTM A 105) and terminal box in fibre glass reinforced polyamide or optionally in stainless steel (AISI 316). Measuring pipe is made of stainless steel (AISI 304) while liners and electrodes are available in various material, which makes the sensor highly resistant to a wide range of chemicals.

The present range of liner types includes:

- PTFE
- PFA
- Soft rubber
- EPDM
- Linatex
- Ebonite Hard Rubber

Electrodes are available in:

- Hastelloy C276 or C22
- AISI 316Ti (1.4571)
- Platinum / Iridium
- Titanium
- Tantalum

The sensors carry a wide range of approvals, see Technical data (Page 55).

### Inspection

- 1. Check for mechanical damage due to possible improper handling during shipment. All claims for damage are to be made promptly to the shipper.
- 2. Make sure the scope of delivery, and the information on the nameplate corresponds to the ordering information.

### MAG 3100 sensor identification nameplate

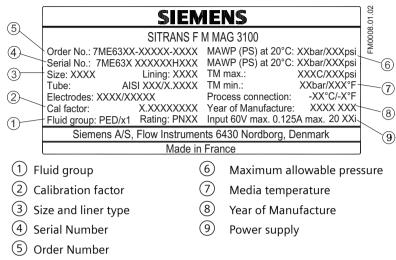

Figure 3-1 Example of product nameplate

### MAG 3100 sensor specification nameplate

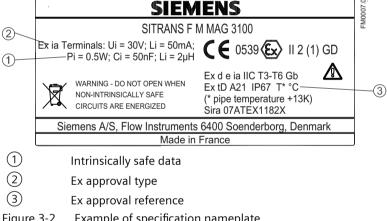

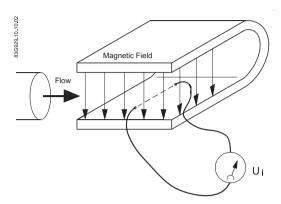

Figure 3-2 Example of specification nameplate

### 3.3 Theory of operation

## 3.3 Theory of operation

The flow measuring principle is based on Faraday's law of electromagnetic induction.

 $U_i$  = When an electrical conductor of length L is moved at velocity v, perpendicular to the lines of flux through a magnetic field of strength B, the voltage  $U_i$  is induced at the ends of the conductor

### $U_i = L \times B \times V$

- U<sub>i</sub> = Induced voltage
- $L = Conductor length = Inner pipe diameter = k_1$
- B = Magnetic field strength = k<sub>2</sub>
- v = Velocity of conductor (media)
- $k = k_1 \times k_2$

 $U_i = k \times v$ , the electrode signal is directly proportional to the fluid velocity

### Operating principle

The coil current module generates a pulsating magnetizing current that drives the coils in the sensor. The current is permanently monitored and corrected. Errors or cable faults are registered by the self-monitoring circuit.

The input circuit amplifies the flow-proportional induced voltage signal from the electrodes. The input impedance is extremely high:  $>10^{14} \,\Omega$  which allows flow measurements on fluids with conductivities as low as 5  $\mu$ S/cm. Measuring errors due to cable capacitance are eliminated due to active cable screening.

The digital signal processor converts the analog flow signal to a digital signal and suppresses electrode noise through a digital filter. Inaccuracies in the transmitter as a result of long-term drift and temperature drift are monitored and continuously compensated for via the self-monitoring circuit. The analog to digital conversion takes place in an ultra low noise ASIC with 23 bit signal resolution. This has eliminated the need for range switching. The dynamic range of the transmitter is therefore unsurpassed with a turn down ratio of minimum 3000:1.

Installing/Mounting

SITRANS F flowmeters with minimum IP65/NEMA 4X enclosure rating are suitable for indoor and outdoor installations.

• Make sure that pressure and temperature specifications indicated on the device nameplate / label will not be exceeded.

### **WARNING**

### Installation in hazardous location

Special requirements apply to the location and interconnection of sensor and transmitter. See Installation in hazardous locations (Page 12)

## 4.1 Installation safety precautions

### **WARNING**

### High pressure hazard

In applications with working pressures/media that can be dangerous to people, surroundings, equipment or others in case of pipe fracture, we recommend that special precautions such as special placement, shielding or installation of a pressure guard or a safety valve are taken when the flowmeter is mounted.

## 4.2 Determining a location

### Note

The sensor must always be completely filled with liquid.

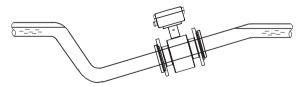

Figure 4-1 Correct installation with filled pipes

### 4.2 Determining a location

- Avoid the following installations
  - Installation at the highest point in the pipe system
  - Installation in vertical pipes with free outlet

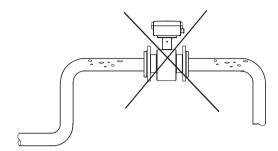

Figure 4-2 Wrong installation at high point

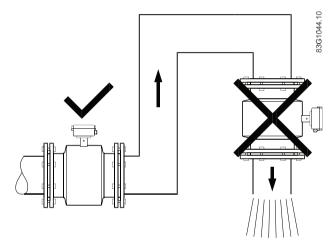

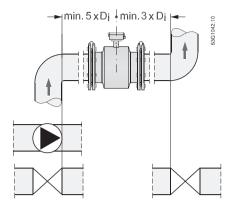

Figure 4-3 Correct installation at low point before outlet

### Inlet and outlet conditions

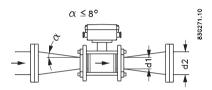

To achieve accurate flow measurement it is essential to have straight lengths of inlet and outlet pipes and a certain distance to pumps and valves.

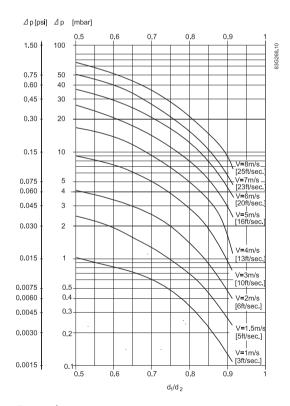

It is also important to centre the flowmeter in relation to pipe flanges and gaskets.

### Installation in large pipes

The flowmeter can be installed between two reducers (for example DIN 28545). At  $\alpha \le 8^{\circ}$  the following pressure drop curves apply. The curves are applicable to water.

### Example:

A flow of 3 m/s (v) in a sensor with a diameter reduction from DN 100 to DN 80 ( $d_1/d_2 = 0.8$ ) gives a pressure drop of 2.9 mbar.

### 4.3 Orienting the sensor

### 4.3 Orienting the sensor

The sensor operates in all orientations, but Siemens has the following recommendations:

· Vertical installation with an upwards flow

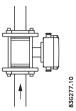

Figure 4-4 Vertical orientation, upwards flow

### **NOTICE**

### Abrasive liquids / liquids containing solid particles

A vertical installation minimizes wear and deposits in the sensor

#### Note

### Gas/air bubbles in the liquid

A vertical installation minimizes any negative effect of gas/air bubbles in the liquid

· Horizontal installation, terminal box upwards or downwards

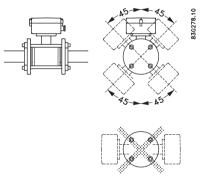

Figure 4-5 Horizontal installation, various terminal box positions

### NOTICE

### Do NOT mount the sensor with the terminal box sideways

This will position the electrodes at the top where there is possibility for air bubbles and at the bottom where there is possibility for mud, sludge, sand etc.

### Note

### **Empty pipe detection**

For applications with empty pipe detection, the sensor can be tilted 45°, as shown above.

### **Transporting**

### Lifting the sensor

Do **NOT** lift the sensor by the terminal box. Do **NOT** use a forklift. If available lift the sensor by the lifting eyes fitted to the device. Otherwise lift the sensor by the process connections.

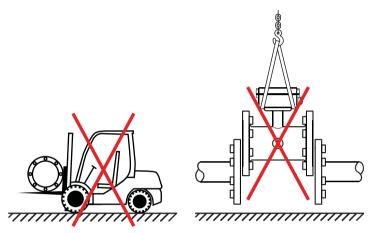

Figure 4-6 Incorrect transportation

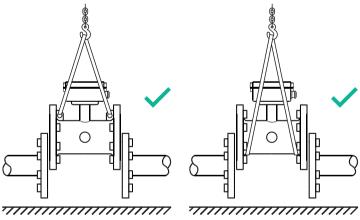

Figure 4-7 Correct transportation

## 4.4 Removing the liner protectors

### **NOTICE**

### Sensors with PTFE or PFA liners only!

The following information in only relevant for sensor types with PTFE or PFA liners!

### 4.4 Removing the liner protectors

### **Sensors with PTFE liner**

At delivery the sensor is mounted with wooden blanks to hold the liner in place during transportation and storage. After only a few hours without the blanks, the liner will creep back towards its original shape and installation will be more difficult to carry out.

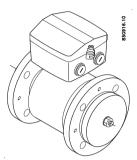

Figure 4-8 Sensor with wooden blanks

· Remove the blanks immediately before mounting the sensor

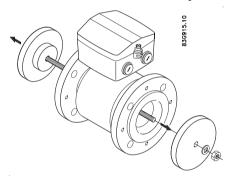

Figure 4-9 Removing wooden blanks

### Sensors with PFA liner

At delivery the sensor is mounted with blanks to protect the liner during transportation and storage.

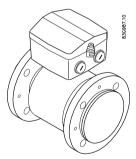

Figure 4-10 Sensor with blanks

• Remove the blanks immediately before mounting the sensor

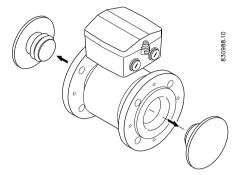

Figure 4-11 Removing blanks

### NOTICE

Do not use sharp objects to remove the blanks as this can damage the liner!

## 4.5 Mounting

- Install the sensor in rigid pipelines in order to support the weight of the meter.
- Center the connecting pipelines axially in order to avoid turbulent flow profiles.
- Use proper gaskets according to liner type.
- If earthing rings are used, use standard flange gaskets on both sides of the ring.

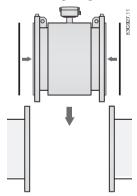

Figure 4-12 Correct installation with gaskets

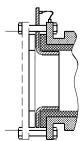

Figure 4-13 Inlet protection

### 4.5 Mounting

### **Transporting**

### Lifting the sensor

Do **NOT** lift the sensor by the terminal box. Do **NOT** use a forklift. If available lift the sensor by the lifting eyes fitted to the device. Otherwise lift the sensor by the process connections.

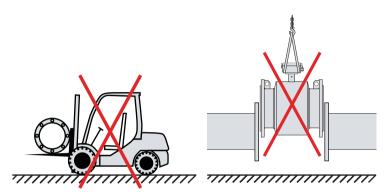

Figure 4-14 Incorrect transportation

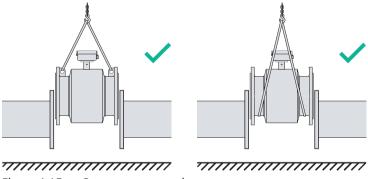

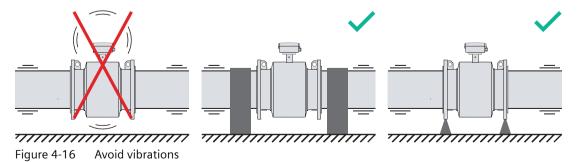

Figure 4-15 Correct transportation

### **Vibrations**

In installations with strong vibrations remote installation of the transmitter is recommended. Alternatively mitigate vibrations by installing pipe support in close proximity to the flowmeter.

### Mounting

Fasten screws according to the torques values below

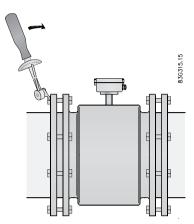

Figure 4-17 Mounting

Leakage/damage to flowmeter or piping may arise if bolts are overtightened.

### **Torque calculations**

All values are theoretical and are calculated on the assumption that:

- All bolts are new and material selection is according to EN 1515-1 table 2.
- Gasket material not exceeding 75 shore A is used between the flowmeter and mating flanges.
- All bolts are galvanized and adequately lubricated.
- Flanges are made of carbon steel.
- Flowmeter and mating flanges are correctly aligned.

## 4.6 Torques values

#### Note

### Conversion to F/Lbs

To convert the torque values from Nm to F/Lbs multiply by 0.74.

## 4.6 Torques values

## 4.7 Potential equalization

To obtain optimum results from the measuring system, the sensor must have the same electrical potential as the liquid being measured.

### 4.7 Potential equalization

This is achieved by means of built-in grounding electrodes.

Figure 4-18 Potential equalization with earthing electrodes

### Cathodic protected piping

Special attention must be paid to systems with cathodic protection.

### Use in hazardous area!

Cathodic pipe protection is not allowed in hazardous areas

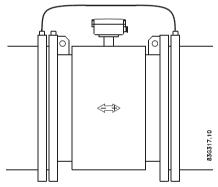

Figure 4-19 Cathodic protection

- Isolate the sensor from cathodic protected pipes using insulated bolts.
- Use bypass cable between the mating flanges

#### Note

### Remote mounted sensor versions

If the above is not acceptable, remote mounted sensors can alternatively be connected as follows:

- Connect coil current cable shield at sensor end via a 1.5 µF condensator
- Make sure that electrode cable shield is not connected at both ends

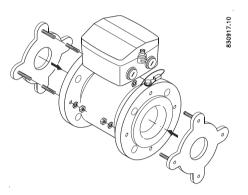

# 4.8 Installation with grounding rings

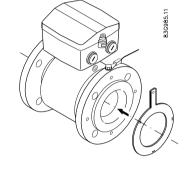

#### NOTICE

#### Only sensors with PTFE or PFA liners without grounding electrodes

Installation with grounding rings is only relevant for sensors with PTFE or PFA liners

• Mount grounding rings where necessary on non-conductive pipes.

Installation with grounding rings on sensors with PTFE liner

Installation with flat grounding rings on sensors with PFA liner

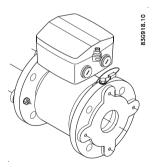

#### Note

### Potential equalization

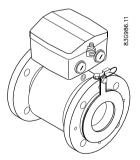

For potential equalization one grounding ring is sufficient.

By unidirectional flow it is recommended to mount the grounding ring on the inlet side.

• Connect the grounding rings to the sensor with the enclosed grounding straps.

Grounding strap connection on flat grounding rings

## 4.8 Installation with grounding rings

#### Note

## **Abrasive liquids**

In special cases the grounding rings can work as inlet protection.

## NOTICE

## High temperature sensors

High temperature sensors are delivered with two factory mounted grounding rings. No further action need to be taken for potential equalisation.

Connecting

The following contains a short description of how to connect a remote mounted sensor to transmitter types:

- SITRANS F M MAG 5000 / 6000 (standard versions)
- SITRANS F M MAG 6000 19" with Safety barrier
- SITRANS F M MAG 6000 I Ex de

For more information, for example about wiring of power supply and outputs, refer to the operating instructions for the respective transmitters.

### Before connecting

Check that the serial numbers on the sensor and the SENSORPROM® unit are identical.

#### 5.1 General safety requirements

### **WARNING**

The pertinent regulations must be observed for electrical installation.

- Never install the device with the mains voltage switched on!
- Danger of electric shock!
- The electrodes and magnetic current line may only be connected when the device is not connected to the power supply.
- If the housing is under voltage (power supply), the cover may be unscrewed by qualified personnel only.

### **▲** WARNING

### Mains supply from building installation Class II

A switch or circuit breaker (max. 15 A) must be installed in close proximity to the equipment and within easy reach of the operator. It must be marked as the disconnecting device for the equipment.

#### Note

#### Hazardous area applications

Special requirements apply to the location and interconnection of sensor and transmitter. See Installation in hazardous locations (Page 12).

### 5.1 General safety requirements

#### **WARNING**

#### Terminal box

Before opening the terminal box check that:

- No explosion hazard exists
- All connection leads are potential free

#### WARNING

### Grounding

The mains protective earth wire must be connected to the PE terminal in accordance with the diagram (class 1 power supply)

#### Mechanical counters

When mounting a mechanical counter to terminals 57 and 58 (active output), a 1000 µF capacitor must be connected to terminals 56 and 58. Capacitor + is connected to terminal 56 and capacitor - to terminal 58.

#### **Output cables**

If long cables are used in electrically noisy environments, it is recommended to use screened cables.

#### Electrode cables

Dotted connections are only to be made when using special electrode cables.

#### **WARNING**

#### **National requirements**

Observe country-specific installation directives for field wiring.

#### Cable specifications

- Only use cables with at least the same degree of protection as the sensor to install the sensor.
- The line length from the cable gland to the terminals must be kept as short as possible. Line loops in the terminal box must be avoided.
- To guarantee the IP67 degree of protection, use cables with the required specifications.

#### **WARNING**

#### Protective conductor terminal

The required cable is min. AGW16 or 1.5 mm<sup>2</sup> Cu.

#### WARNING

#### Wire insulation

For field wiring installation: Ensure that the national requirements of the country in which the flowmeters are installed is met.

#### See also

Cable data (Page 61)

## 5.2 Remote installation

#### Note

### Remote installation only

The following applies to remote installation of MAG 5000 / 6000 or MAG 6000 I.

1. Unscrew and remove terminal box lid.

2. Mount the two terminal blocks as shown and insert electrode cable plug ① (terminals 82, 0 and 83) and coil cable plug ② (terminals 85 and 86).

Terminals electrode cable: 82, 0 and 83

Terminals special electrode cable: 84, 83, 0, 82 and 81

Terminals coil cable: 85; 86

#### Note

## Special electrode cable

Special electrode cable must be connected to terminals 84, 83, 0, 82 and 81.

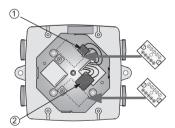

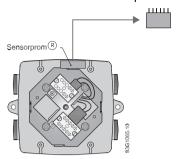

Figure 5-1 Terminal box without blocks

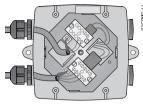

# 5.2 Remote installation

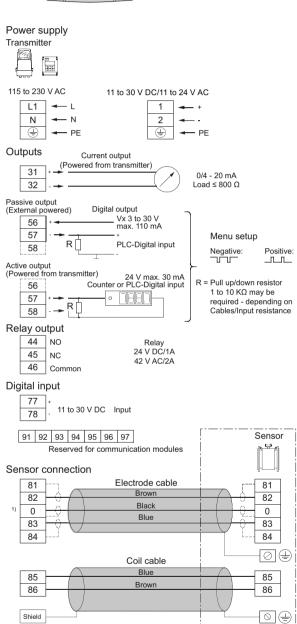

3. Remove SENSORPROM® unit from sensor and mount it on connection plate in transmitter, see relevant transmitter operating instructions.

4. Fit the  $\frac{1}{2}$ " NPT or M20 cable glands for supply and output cables.

5. Fit and connect electrode and coil cables as shown below.

Note:
 Special cable with individual wire shields (shown as dotted lines) are only required when using empty pipe function or long cables.

#### 5.3 Installation check

## **CAUTION**

#### Unscreened cable ends

Keep unscreened cable ends as short as possible.

## A CAUTION

#### Prevent interference

Separate electrode and coil cables to prevent interference.

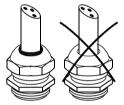

## **WARNING**

#### Use in hazardous area

Connect mains protective earth to the PE terminal in accordance with the above diagram in order to obtain potential equalization.

6. Tighten cable glands well to obtain optimum sealing. The cable entry gasket must obtain firm contact with the cable.

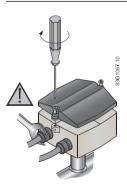

7. Remount terminal box lid.

#### Note

## **Tightening torque**

Tighten the bolts with 0.5 Nm.

#### 5.3 Installation check

The meter is now ready to go into normal operation - for commissioning and setting of parameters refer to the relevant transmitter manual.

Before commissioning it must be checked that:

• The device has been installed and connected in accordance with the guidelines provided previous in this chapter and in AUTOHOTSPOT.

# 5.4 Potting

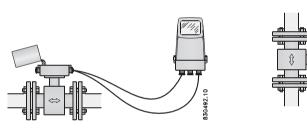

If sensor is buried or permanently submerged, terminal box must be encapsulated with silicon dielectric gel (non-toxic, transparent and self-healing gel).

#### **NOTICE**

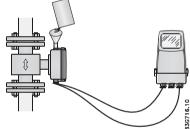

#### **Electrical connections**

Do **not** pot meter before electrical connections have been made.

- Mix the two components of the potting kit well and pour into terminal box.
- Let cure for approximately 24 hours at approximately 25°C (77°F). Curing time increases by 100% per -10°C (-18°F).

Horizontal orientation

Vertical orientation

#### Note

Gel can be penetrated with test instruments or be removed in case of cable replacement.

5.4 Potting

Service and maintenance

## 6.1 Maintenance

The device is maintenance-free. However, a periodic inspection according to pertinent directives and regulations must be carried out.

An inspection can include check of:

- Ambient conditions
- Seal integrity of the process connections, cable entries, and cover screws
- Reliability of power supply, lightning protection, and grounds

#### NOTICE

Repair and service must be carried out by Siemens authorized personnel only.

#### Note

Siemens defines flow sensors as non-repairable products.

## 6.2 Recalibration

Siemens Process Instrumentation offers to recalibrate the sensor. The following calibration types are offered as standard:

- Standard matched pair calibration
- Customer-specified calibration
- Accredited Siemens ISO/IEC 17025 calibration

#### Note

For recalibration the SENSORPROM unit must always be returned with the sensor.

6.4 Repair

#### 6.3 Transportation and storage

To guarantee sufficient protection during transport and storage, observe the following:

- Keep the original packaging for subsequent transportation.
- Devices/replacement parts should be returned in their original packaging.
- If the original packaging is no longer available, ensure that all shipments are properly packaged to provide sufficient protection during transport. Siemens cannot assume liability for any costs associated with transportation damages.

#### **A** CAUTION

#### Insufficient protection during storage

The packaging only provides limited protection against moisture and infiltration.

Provide additional packaging as necessary.

Special conditions for storage and transportation of the device are listed in Technical data (Page 55).

#### 6.4 Repair

#### **WARNING**

### Impermissible repair of explosion protected devices

Risk of explosion in hazardous areas

Repair must be carried out by Siemens authorized personnel only.

### WARNING

## Impermissible accessories and spare parts

Risk of explosion in areas subject to explosion hazard.

- Only use original accessories or original spare parts.
- Observe all relevant installation and safety instructions described in the instructions for the device or enclosed with the accessory or spare part.

## 6.5 Technical support

If you have any technical questions about the device described in these Operating Instructions and do not find the right answers, you can contact Customer Support:

- Via the Internet using the **Support Request**: Support request (http://www.siemens.com/automation/support-request)
- · Via Phone:

Europe: +49 (0)911 895 7222
America: +1 423 262 5710
Asia-Pacific: +86 10 6475 7575

Further information about our technical support is available on the Internet at Technical support (http://support.automation.siemens.com/WW/view/en/16604318)

### Service & Support on the Internet

In addition to our documentation, we offer a comprehensive knowledge base online on the Internet at:

Service and support (http://www.siemens.com/automation/service&support)

There you will find:

- The latest product information, FAQs, downloads, tips and tricks.
- Our newsletter, providing you with the latest information about your products.
- Our bulletin board, where users and specialists share their knowledge worldwide.
- You can find your local contact partner for Industry Automation and Drives Technologies in our partner database.
- Information about field service, repairs, spare parts and lots more under Services.

## **Additional Support**

If you have additional questions about the device, please contact your local Siemens representative and offices at:

**AUTOHOTSPOT** 

#### See also

Local contact person (http://www.automation.siemens.com/partner)

Enclose the delivery note, the cover note for return delivery and the declaration of decontamination form on the outside of the package in a well-fastened clear document pouch.

#### 6.5 Technical support

## **Required forms**

- Delivery Note
- Cover Note for Return Delivery with the following information Cover note (http://support.automation.siemens.com/WW/view/en/16604370)
  - product (ordering number)
  - number of devices or spare parts returned
  - reason for the return

#### Declaration of Decontamination

Declaration of Decontamination (<a href="http://www.automation.siemens.com/w1/efiles/">http://www.automation.siemens.com/w1/efiles/</a> automation-technology/pi/Service/declaration\_of\_decontamination\_en.pdf)
With this declaration you certify that the returned products/spare parts have been carefully cleaned and are free from any residues.

If the device has been operated together with toxic, caustic, flammable or water-damaging products, clean the device before return by rinsing or neutralizing. Ensure that all cavities are free from dangerous substances. Then, double-check the device to ensure the cleaning is completed.

We shall not service a device or spare part unless the declaration of decontamination confirms proper decontamination of the device or spare part. Shipments without a declaration of decontamination shall be cleaned professionally at your expense before further proceeding.

You can find the forms on the Internet and on the CD delivered with the device.

Troubleshooting/FAQs

### 7.1 Sensor check

## Requirement

To check the SITRANS FM sensors the following test instruments will be required:

- Digital Meter/Multimeter
- Megger
- (Moving Coil Meter)

#### Sensor check

Remove the transmitter from the sensor or remote position before making the following checks.

#### Coil resistance check

• Measure the coil resistance between connection numbers 85 and 86 using a digital meter. Resistance should be within range stated in Coil resistance table (Page 71).

A low reading may indicate moisture within the coil housing or shorted coil tums.

A high reading would indicate an open circuit coil.

#### Note

In case of deviation from nominal coil values, the sensor is damaged and must be replaced

#### Coil insulation check

WARNING

#### Potential hazard!

Only carry our a coil insulation check in non-hazardous area!

• Megger between connection number 85 and the sensor body. The resistance should be above 20 M $\Omega$ .

A low megger reading would indicate the coil insulation is breaking down. This is normally due to fluid ingress into the coil housing.

Sensors with an insulation resistance down to 1  $M\Omega$  may still work satisfactorily but this is not guaranteed.

#### 7.2 Fluctuating process values

#### Electrode resistance check

- Measure the electrode resistance between connections 82 and 0 with a moving coil meter. With a sensor full of fluid the resistance should be between 5 K $\Omega$  and 50 K $\Omega$ . If the sensor is empty the resistance will be infinite.
- Repeat the resistance measurements between connections 83 and 0. The results should be the same.

If the resistance is low there may be a short on the electrodes or wiring (in the case of a remote mounted transmitter). Alternatively there may be water ingress or moisture in the terminal box.

If the resistance is high and the pipe is completely full of fluid check the following:

- 1. Fluid is electrically conductive.
- 2. Electrodes are not coated with grease or any deposit.
- 3. Electrode circuit is not open.
- 4. Remote mounted transmitter has a 3 core cable with an overall shield continuously from sensor to transmitter, including junction boxes and terminal rails inside panels.
- 5. Shield is connected to 0 or to earth terminal (PE) on sensor.

#### Note

#### Sensors removed from line

For sensors removed from line with dry bore, use megger between terminal 82 and compression plate, and 83 and compression plate to show any water ingress behind electrodes or within enclosure.

# 7.2 Fluctuating process values

#### Question

Why do the displayed process values fluctuate when the electrode cable is moved?

#### **Answer**

There are several causes of the fluctuating process values:

- Deposits on electrodes
  - Clean the electrodes.
- Defect electrode cable
  - Replace the cable
- Incorrect cable connection
  - Connect the electrode cable (82, 83, 0 and shield) according to the instructions in Connecting (Page 39)

#### Note

## Vibrating environments

It is recommended to use special low noise cables for sensor sizes DN 2 and DN 3 installed in vibrating environments.

<sup>1)</sup> For sizes larger than 600 mm (24") in PN 16 PED conformity is available as a cost-added option. The basic unit will carry the LVD (Low Voltage Directive) and EMC approval.

## 8.1 Cable data

## Description

Cable for standard electrode or coil	
Electrode cable, double shielded	
Cable kit with standard coil cable and electrode cable double shielded (also available as low noise cable for MAG 1100 sensor)	

## **Standard applications**

Table 8-9 Technical data, standard application cables

		Coil cable	Standard elec- trode cable				
Basic data	No. of conductors	2	3				
	Min. sqr. area	0.5 mm <sup>2</sup>	0.2 mm <sup>2</sup>				
	Shield	Yes	Yes				
	Max. capacitance	N/A	350 pF/m				
Max. cable loop resistance	Media temperature:						
	< 100 °C (212 °F)	40 Ω	N/A				
	> 200 °C (392 °F) 6 Ω N/A						
Cable glands on sensor	M20x1.5 gland - Cable ø 5 to 13 mm (0.20 to 0.51 inches)						
and transmitter	½ NPT gland - cable ø 5 to 9 mm (0.20 to 0.35 inches)						

## Special applications, for example low conductivity or electrical noise

Table 8-10 Technical data, special application cables

		Coil cable	Special electrode cable
Basic data	No. of conductors	3	3
	Sqr. area	1.5 mm <sup>2</sup>	0.25 mm <sup>2</sup>

Table 8-12 Imperial measures (pressure in psi) - Sizes 1", 11/2" and >12"

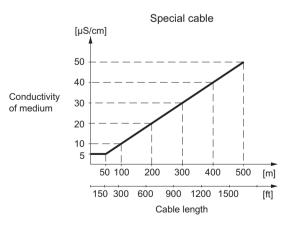

# 8.3 Process fluid conductivity

## **Compact installation**

Liquids with an electrical conductivity  $\geq 5 \mu S/cm$ .

## Remote installation

## **⚠** WARNING

## **Empty pipe detection**

The installation has to fulfill the following limitations for usage of the empty pipe detection function:

- media conductivity ≥ 20 µS/cm
- length of cable at remote installation  $\leq 50$  (150 ft)
- special shield cable must be used

## Note for MAG 1100 sizes DN 2 and DN 3:

- empty pipe detection is not available
- media conductivity ≥ 30 µS/cm

## Note for MAG 5000/6000 CT (FW 3.03):

empty pipe detection is not available

#### Liner selection 8.4

Table 8-13

Liner	Applications
EPDM	Drinking Water, Low abrasive media, Food & Beverage
Ebonite	Drinking Water, Wastewater, Fine low abrasive media
PTFE	Drinking Water, Wastewater, Chemicals, Food & Beverage, Pulp & Paper
PFA	Drinking Water, Wastewater, Chemicals, Food & Beverage, Pulp & Paper
Linatex	Abrasive media
Soft rubber	Drinking Water, Wastewater, Abrasive media, Chemicals

#### 8.5 **Electrode selection**

Table 8-14

Electrodes	Applications	Chemical Resistance
Stainless Steel	Drinking Water, Wastewater, Chemi- cals, Food & Beverage, Pulp & Paper	Reducing acids, Oxidicing acids, Organic acids, Alkalis, Diluted salts
Hastelloy C22	Drinking Water, Wastewater, Abrasive Liquids, Chemicals, Food & Beverage, Pulp & Paper	Reducing acids, Oxidicing acids, Organic acids, Alkalis, Diluted salts
Hastelloy C267	Drinking Water, Wastewater, Abrasive Liquids, Chemicals, Food & Beverage, Pulp & Paper	Reducing acids, Oxidicing acids, Organic acids, Alkalis, Diluted salts

Electrodes	Applications	Chemical Resistance
Titanium	Drinking Water, Wastewater, Chemi- cals, Food & Beverage, Pulp & Paper	Reducing acids, Oxidicing acids, Organic acids, Alkalis, Diluted salts
Tantalum	Drinking Water, Wastewater, Chemi- cals, Food & Beverage, Pulp & Paper	Reducing acids, Oxidicing acids, Organic acids, Alkalis, Diluted salts
Platinum	Drinking Water, Wastewater, Chemi- cals, Food & Beverage, Pulp & Paper	Reducing acids, Oxidicing acids, Organic acids, Alkalis, Diluted salts

# 9.1 Ordering of spare parts

Ensure that your ordering data is not outdated. The latest ordering data is always available on the Internet: Process instrumentation catalog (<a href="https://www.siemens.com/">https://www.siemens.com/</a> processinstrumentation/catalogs)

9.1 Ordering of spare parts

# Glossary

#### **ASIC**

Application-Specific Integrated Circuit is an integrated circuit (IC) customized for a particular use, rather than intended for general-purpose use.

#### **EMC**

Electromagnetic compatibility (EMC) is the branch of electrical sciences which studies the unintentional generation, propagation and reception of electromagnetic energy with reference to the unwanted effects (Electromagnetic Interference, or EMI) that such energy may induce. The goal of EMC is the correct operation, in the same electromagnetic environment, of different equipment which use electromagnetic phenomena, and the avoidance of any interference effects.

#### **HART**

HART Communication is a bi-directional industrial field communication protocol used to communicate between intelligent field instruments and host systems. HART is the global standard for smart process instrumentation and the majority of smart field devices installed in plants worldwide are HART-enabled. HART technology is easy to use and very reliable

#### IΡ

An IP (Ingress Protection) number is used to specify the environmental protection of enclosures around electronic equipment. These ratings are determined by specific tests. The IP number is composed of two numbers, the first referring to the protection against solid objects and the second against liquids. The higher the number, the better the protection. For example, in IP67 the first Number (6) means that the device is totally protected against dust, and the second (7) that it is protected against the effect of immersion between 15cm and 1m

## **MODBUS**

MODBUS is a serial communications protocol intended for use with programmable logic controllers (PLCs). MODBUS allows for communication between many devices connected to the same network, for example a system that measures temperature and humidity and communicates the results to a computer. MODBUS is often used to connect a supervisory computer with a remote terminal unit (RTU) in supervisory control and data acquisition systems.

## **NAMUR**

Normenarbeitsgemeinschaft für Meß- und Regeltechnik in der Chemischen Industrie (NAMUR). NAMUR is a group representing the interests of the chemical industry which create standards for instrumentation and electrical devices used in industrial plants.

#### **PED**

The Pressure Equipment Directive (97/23/EC) is the legislative framework on European level for equipment subject to a pressure hazard. It was adopted by the European Parliament and the European Council in May 1997 and has been obligatory throughout the European Union since May 2002.

#### **PROFIBUS**

PROFIBUS (Process Field Bus) is a vendor-independent, open bus system standardized in the German DIN 19 245. It is a standard for field bus communication in automation technology and should not be confused with the PROFINET standard for industrial Ethernet. PROFIBUS-PA (Process Automation) is one of three PROFIBUS variants that are compatible with each other. PROFIBUS-DP (Decentralized Periphery)

#### **SENSORPROM**

All sensor related settings/data saved on an EPROM. SENSORPROM technology automatically configures the transmitter at start up providing calibration data, pipe size, sensor type, and output settings. The SENSORPROM automatically stores values or settings changed by users, and automatically re-programs any new transmitter without loss of accuracy.

#### Turndown ratio

'Turndown ratio' is a flow measurement term indicating the range a specific flow meter, or meter type, is able to measure with acceptable accuracy. It is also known as rangeability. If a gas flow to be measured is expected to vary between 100,000 m³ per day and 1,000,000 m³ per day, the specific application has a turndown ratio of at 10:1. Therefore the meter requires a turndown ratio of at least 10:1.

#### **USM**

USM II is a Communication Platform. The Siemens USM II concept enables fitting of add-on bus modules without loss of functionality:

- 1. All modules can be fitted as true "plug & play"
- 2. Module and transmitter are automatically configured through the SENSORPROM
