Analogue	Digital	Analogue	Digital

By means of the chart recorder **IDS 400 mobile**, all measured data of a compressor station can be recorded, indicated and evaluated. All sensors of our product range can be connected to the **digital sensor inputs**, e.g.:

flow meters, dew point sensors, current/effective power meters and third-party sensors with Modbus (RS 485).

At **analogue sensor inputs** third party sensors and meters with the following signal output could be connected: 4-20 mA, 0-20 mA | 0-1 V / 0-10 V / 0-30 V | Pt 100 (2- or 3-wire), Pt 1000 (2- or 3-wire), pulse outputs (e.g. of gas meters), Modbus protocol
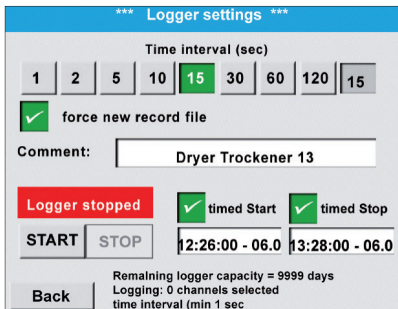

Configuration of flow sensor

In the menu of the IDS 500 mobile / IDS 400 mobile, the flow meter VA 500 can be set to the respective pipe inside diameter. Furthermore, the unit, the gas type and the reference condition can be set. The meter reading can be set to "zero" if necessary.

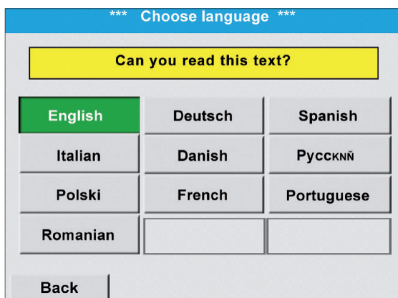

Graphic view

In the graphic view all measured values are indicated as curves.
It is possible to browse back on the time axis by a slide of the finger (without data logger maximum 24 h, with data logger back to the start of the measurement).

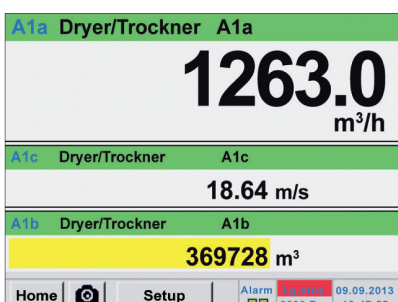

Data logger

With the option "integrated data logger", the measured values are stored in the IDS 500/IDS 400. The time interval can be freely set. Furthermore there is the possibility to fix the starting time and the end time of the data recording. Read-out of the measured data via USB interface or via the optional Ethernet interface.

Selection of the language

Many languages are already stored in every IDS 500 mobile/IDS 400 mobile. The desired language can be selected via the selection button.

All relevant parameters at a glance

In addition to the flow rate in m³/h, the IDS 500 mobile/IDS 400 mobile also displays other parameters such as total consump-tion in m³ and speed in m/s.
