

Digital temperature transmitter, head-mounted version For PROFIBUS® PA or FOUNDATION™ Fieldbus Models OTMT84, OTMT85

WIKA data sheet TE 84.01

for further approvals
see page 7

Applications

- Process industry
- Machine building and plant construction

Special features

- Model OTMT84: PROFIBUS® PA profile 3.02
- Model OTMT85: FOUNDATION™ Fieldbus H1
- Explosion-protected version Ex ia (intrinsically safe/ FISCO) and Ex ec available

Fieldbus temperature transmitter, model OTMT84

Description

The models OTMT84 and OTMT85 temperature transmitters with FOUNDATION™ Fieldbus or PROFIBUS® PA communication feature a universal input for temperature measurements with resistance thermometers, thermocouples, resistance sensors and voltage sources, which are possible with or without customer-specific linearisation. Differential, average or redundancy temperature measurements can be realised.

The temperature transmitters are characterised by their reliability, long-term stability, high accuracy and extended diagnostic options.

For FOUNDATION™ Fieldbus, the OTMT85 is available with LAS functionality (Link Active Scheduler) and PID controller. These functionalities allow for master-independent regulations in the field instrument.

The models OTMT84, OTMT85 temperature transmitters have a polarity-independent bus connection. Due to their small dimensions, the temperature transmitters are suitable for mounting into form B connection heads in accordance with DIN EN 50446.

The temperature transmitters are delivered with a factory configuration or configured according to customer specifications within the given limits.

Part of your business

Specifications

Measuring element					
Sensor type	Max. configurable measuring range	Standard	Digital measuring deviation (\pm) ¹⁾		Non-repeatability (\pm)
			Maximum	Measured value dependent	
Pt100	-200 ... +850 °C	IEC 60751: 2008	$\leq \pm 0.12$ °C	0.06 °C + 0.006 % x (MV-MRS)	≤ 0.05 °C
		JIS C1604: 2013	$\leq \pm 0.09$ °C	0.05 °C + 0.006 % x (MV-MRS)	≤ 0.04 °C
Pt1000	-200 ... +850 °C	IEC 60751:2008	$\leq \pm 0.09$ °C	0.03 °C + 0.013 % x (MV-MRS)	≤ 0.05 °C
Ni100	-60 ... +250 °C	DIN 43760: 1987	$\leq \pm 0.05$ °C	0.05 °C + 0.006 % x (MV-MRS)	≤ 0.03 °C
Resistance sensor	■ 10 ... 400 Ω ■ 10 ... 2,000 Ω	-	■ 32 m Ω ■ 300 m Ω	-	■ 15 m Ω ■ ≤ 200 m Ω

1) Value transmitted via fieldbus

MV = measured value (temperature measured values in °C)

MRS = Start of measuring range of each sensor

Measuring span = configured end of measuring range - configured start of measuring range

Further details on: Measuring element	
Measuring current during measurement	Max. 0.3 mA (Pt100)
Connection methods	
Resistance thermometer (RTD)	1 sensor in 2-/3-/4-wire connection or 2 sensors in 2-/3-wire connection → For further information, see "Designation of connection terminals"
Thermocouples (TC)	1 sensor or 2 sensors → For further information, see "Designation of connection terminals"
Max. lead resistance	
Resistance thermometer (RTD)	50 Ω each wire, 3-/4-wire
Thermocouples (TC)	5 k Ω each wire
Cold junction compensation, configurable	Internal cold junction (Pt100) External cold junction: Value adjustable -40 ... +85 °C [-40 ... +185 °F]

Accuracy specifications			
Typical measuring deviation (per DIN EN 60770, 25 °C ±3 °C, supply voltage 24 V DC)			
Input sensor type	Standard	Measuring range	Typical measuring deviation (±) Digital value ¹⁾
Pt100	IEC 60751:2008	0 ... 200 °C	0.08 °C
Pt1000	IEC 60751:2008	0 ... 200 °C	0.08 °C
TC type K (NiCr-Ni)	IEC 60584-1	0 ... 800 °C	0.31 °C
TC type S (PtRh-Pt)	IEC 60584-1	0 ... 800 °C	0.97 °C
TC type L (Fe-CuNi)	GOST R8.8585-2001	0 ... 800 °C	2.18 °C

The specifications for measurement accuracy correspond to 2 σ (Gaussian normal distribution). The specifications include non-linearity and repeatability.

1) Value transmitted via fieldbus

Example calculation

Pt100 / Measuring range 0 ... 200 °C / Ambient temperature 25 °C / Supply voltage DC 24 V	
Measuring deviation 0.06 °C + 0.006 % x (200 °C - (-200 °C))	0.084 °C

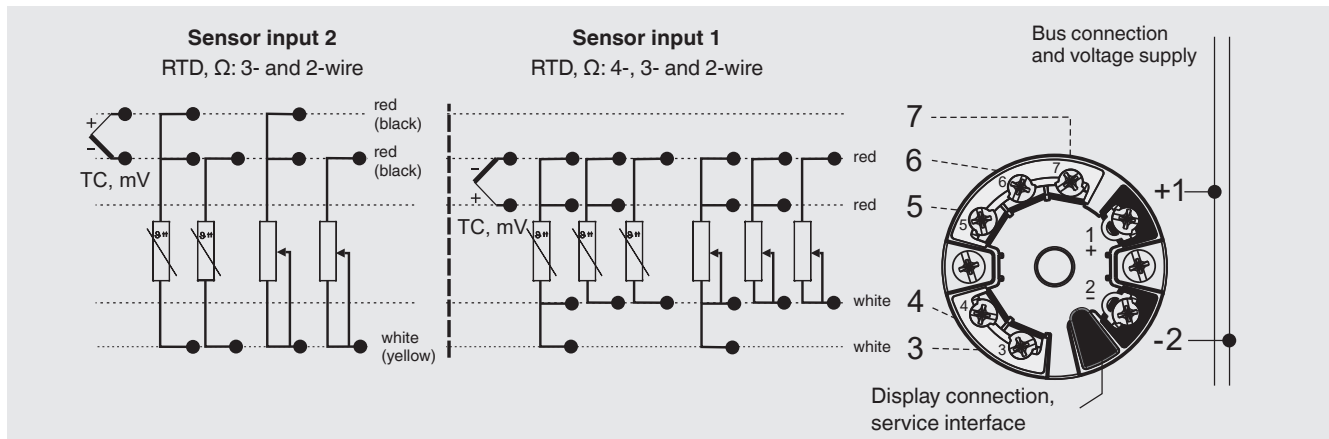

Pt1000 / Measuring range 0 ... 200 °C / Ambient temperature 35 °C / Supply voltage DC 30 V	
Measuring deviation 0.06 °C + 0.006 % x (200 °C - (-200 °C))	0.084 °C
Influence of ambient temperature (35 - 25) x (0.002 % x 200 °C - (-200 °C)) min. 0.005 °C	0.08 °C
Influence of supply voltage (30 - 24) x (0.002 % x 200 °C - (-200 °C)) min. 0.005 °C	0.048 °C
Measuring deviation (typical) $\sqrt{(\text{measuring deviation}^2 + \text{influence of ambient temperature}^2 + \text{influence of supply voltage}^2)}$	0.126 °C

Output signal	
Analogue output	<ul style="list-style-type: none"> ■ FOUNDATION™ Fieldbus ■ PROFIBUS® PA
Version of analogue output	
FOUNDATION™ Fieldbus	H1, IEC 61158-2
PROFIBUS® PA	EN 50170 vol. 2 / profile 3.02
Residual current FDE (Fault Disconnection Electronic)	0 mA
Data transfer rate (supported baud rate)	31.25 kBit/s
Signal coding	Manchester
Functionality	Basic or LAS
Function blocks	
FOUNDATION™ Fieldbus	2 x 3 analogue input (AI) 1 x standard PID controller 1 x input selector (ISEL)
PROFIBUS® PA	4x analogue input (AI)
Execution time, PID controller	< 200 ms
Response time (programmable)	1 ... 60 s
Updating time	< 400 ms
Execution time, analogue input block	< 50 ms
Factory configuration	
Sensor	Pt100
Connection method	3-wire connection
Measuring range ("Limit Handling")	0 ... 100 °C
Communication	
Communication protocol	Model OTMT84 PROFIBUS® PA profile 3.02
	Model OTMT85 FOUNDATION™ Fieldbus H1
Configuration software	Endress+Hauser FieldCare (DTM) SIMATIC PDM (EDD)
	→ Free download from www.de.endress.com
Configuration	
User linearisation	Store customer-specific sensor characteristics in the transmitter using software (other sensor types can be used in this way) Number of data points: min. 2 / max. 30
Monitoring functions	
Test current for sensor monitoring ³⁾	Nom. 20 µA during test cycle, otherwise 0 µA
Sensor break monitoring	Always active
Sensor short-circuit monitoring	Active (only for resistance thermometers)
Self-monitoring	Active permanently, e.g. RAM/ROM test, logical program operating checks and validity check
Measuring range monitoring	Monitoring of the set measuring range for upper/lower deviations Standard: Deactivated

Output signal		
Monitoring functionality when 2 sensors have been connected (dual sensor)	Redundancy	In the case of a sensor error (sensor break, lead resistance too high or outside the measuring range of the sensor) of one of the two sensors, the process value will be only based on the error-free sensor. Once the error is rectified, the process value will again be based on the two sensors, or on sensor 1.
	Ageing control (sensor drift monitoring)	An error signalling on the output is activated if the value of the temperature difference between sensor 1 and sensor 2 is higher than a set value, which can be selected by the user. This monitoring only generates a signal if two valid sensor values can be determined and the temperature difference is higher than the selected limit value. (Cannot be selected for the "Difference" sensor functionality, since the output signal already indicates the difference value).
Voltage supply		
Supply voltage U_B	DC 9 ... 32 V Not dependant on polarity (max. 35 V)	

Electrical connection	
Connection type	Screw terminals
Wire cross-section	$\leq 2.5 \text{ mm}^2$ (14 AWG)
Cable design	Rigid or flexible
Max. lead resistance	
Resistance thermometer (RTD)	50 Ω each wire, 3-/4-wire
Thermocouples (TC)	5 k Ω each wire
Insulation voltage (input to analogue output)	AC 2 kV, (50 Hz / 60 Hz); 1 s

Designation of connection terminals

The following connection combinations are possible when assigning the sensor inputs

Sensor input 2	Sensor input 1			
	RTD or resistance sensor, 2-wire	RTD or resistance sensor, 3-wire	RTD or resistance sensor, 4-wire	Thermocouple (TC), voltage source
RTD or resistance sensor, 2-wire	x	x	-	x
RTD or resistance sensor, 3-wire	x	x	-	x
RTD or resistance sensor, 4-wire	-	-	-	-
Thermocouple (TC), voltage source	x	x	x	x

Materials	
Non-wetted parts	Case: Polycarbonate (PC) Screw terminals: Nickel-plated brass, gold-plated contact Potting: WEVO PU 403 FP/FL

Operating conditions	
Ambient temperature	-40 ... +85 °C
Storage temperature	-40 ... +100 °C
Max. relative humidity per IEC 60068-2-30	95 %
Condensation per IEC 60068-2-33	Condensation allowed
Climate class per IEC 654-1: 1993	Cx (-40 ... +85 °C, 5 ... 95 % r. h.)
Shock and vibration resistance per DIN EN 60068-2-6	10 ... 2,000 Hz at 5 g
Ingress protection of the complete instrument (per IEC/EN 60529)	IP00 (with screw terminals)
Service life	Max. service life of 20 years (in line with ISO 13849-1)

Approvals
