## Pneumatic pressure balance Model CPB5000

for further approvals
see page 7

## Applications

- Primary standard for defining the pressure scale in a pneumatic range of up to 100 bar ( $1,500 \mathrm{psi}$ ) or with a gas to oil separator up to $400 \operatorname{bar}(5,000 \mathrm{psi})$
- Reference instrument for factory and calibration laboratories for the testing, adjustment and calibration of pressure measuring instruments
■ Complete, stand-alone system, also suitable for on-site use

## Special features

■ Total measurement uncertainty to $0.008 \%$ of reading

- Factory calibration included as standard, traceable to national standards; with DKD/DAkkS calibration possible as an option
■ High long-term stability with recommended recalibration interval every five years
- Masses manufactured from stainless steel and aluminium, can be adjusted to local gravity
■ Quick and safe replacement of the piston-cylinder system for measuring range changes via patented ConTect quickrelease system as an option

## Description

## Proven primary standard

Pressure balances (dead-weight testers) are the most accurate instruments available on the market for the calibration of electronic or mechanical pressure measuring instruments. The direct measurement of the pressure ( $p=F / A$ ), as well as the use of high-quality materials enable a very small measurement uncertainty, in conjunction with an excellent long-term stability.
The pressure balance (dead-weight tester) has therefore been used for years in factory and calibration laboratories in industry, national institutes and research laboratories.

## Stand-alone operation

Due to its integrated pressure generation and the purely mechanical measuring principle, the model CPB5000 is ideal for on-site use for maintenance and service.

Pneumatic pressure balance, model CPB5000

## Basic principle

Pressure is defined as the quotient of force and area. The core component of the CPB5000 is therefore a very precisely manufactured piston-cylinder system, onto which a mass load is applied in order to generate the individual test points.

The mass load is proportional to the target pressure and this is achieved through optimally graduated masses. As standard, these masses are manufactured to the standard gravity ( $9.80665 \mathrm{~m} / \mathrm{s}^{2}$ ), though they can be adjusted to a specific location and also DKD/DAkkS calibrated.

## Easy operation

The pressure setting depends on the instrument version and is either done via an integrated pump or from external pressure supply via a metering valve. For further pressure increases and fine adjustment, a very precisely controllable spindle pump is fitted, which only runs within the pump body.

## The piston-cylinder system

Both the piston and cylinder are manufactured from tungsten carbide. This pairing of materials, in comparison to other materials, has very low pressure and temperature coefficients of expansion, which results in a very good linearity for the effective area of the piston and a very high accuracy.

Piston and cylinder are very well protected against contact, impacts or contamination from outside in a solid stainlesssteel case. At the same time, overpressure protection is integrated, which prevents the piston from being forced out vertically and avoids damage to the piston-cylinder system in the event of masses removal under pressure.

The masses are stacked on a mass carrier, which sits on the piston shaft. The construction of the mass carrier provides a very low centre of gravity for the stacked masses, which minimises both the side thrust on the piston-cylinder system and the friction. For relatively low starting pressures, a lighter aluminium plate can be used instead of the mass carrier.

The overall design of the piston-cylinder system and the very precise manufacturing of both the piston and the cylinder, ensures excellent operating characteristics with long free-rotation time and low sink rates. Thus a high long-term stability is ensured. Therefore, the recommended recalibration interval is two to five years dependent on the conditions of use.

Piston-cylinder system model CPS5000

As soon as the measuring system reaches equilibrium, there is a balance of forces between the pressure and the masses applied. The excellent quality of the system ensures that this pressure remains stable over several minutes, so that the pressure value for comparative measurements can be read without any problems, or also so that more complex adjustments can be carried out on the test item.

The connection of the piston-cylinder system is a M30 x 2 male thread as standard.
The patented ConTect quick-release connector, for easy measuring range changes without the need for tools, is available as an option.

## High-performance instrument range

The CPB5000 basic instruments are available in the following three designs:

- Pneumatic base, low pressure
- up to max. 10 bar (150 psi)
- with integrated pressure generation through priming pump and spindle pump

■ Pneumatic base, high pressure/vacuum

- up to max. 100 bar (1,500 psi)
- connection for external pressure supply or vacuum
- Pneumatic base with integrated gas to oil separator
- up to max. 400 bar (5,000 psi)
- connection for external pressure supply
- for use with hydraulic piston-cylinder systems with M30 x 2 connection
- test items can be easily, dryly and cleanly calibrated with air

As standard, all basic instruments are fitted with a connection for the piston-cylinder system with a M30 x 2 female thread. The optional, integratable, patented ConTect quick-release connector enables a quick and safe changing of the measuring range without tools. Thus one can build a priceoptimised complete system out of a universal system base and up to 3 ConTect piston-cylinder systems of different measuring ranges, which can be operated with only one mass set.

The hydraulic measuring ranges of the model CPS5000 piston-cylinder systems can be used on the instrument base of the CPB5800 hydraulic pressure balance. For this, the ConTect quick-release connector is needed.

## Tables of masses

The following tables show the number of masses within a mass set with their nominal mass values and the resulting nominal pressures for the respective measuring ranges. Should the instrument not be operated under reference conditions (ambient temperature $20^{\circ} \mathrm{C}\left(68^{\circ} \mathrm{F}\right)$, atmospheric pressure 1,013 mbar ( 14.69 psi ), relative humidity $40 \%$ ),
the relevant corrections must be made, for example with the CPU6000 CalibratorUnit, see page 9.

The masses are manufactured, as standard, to the standard gravity ( $9.80665 \mathrm{~m} / \mathrm{s}^{2}$ ) although they can be adjusted for any local gravity.

## Transport dimensions for complete instrument

The complete instrument, in its standard version and standard scope of delivery, consists of 3 packages on a single pallet. The dimensions are $1,200 \times 800 \times 500 \mathrm{~mm}(47.3 \times 31.5 \times 19.7 \mathrm{in})$.
The overall weight is dependent on the measuring range.

| Version in bar | Weight |  |
| :--- | :--- | :--- |
|  | net | gross |
| Pneumatic |  |  |
| -1 bar | $32.5 \mathrm{~kg}(71.8 \mathrm{lbs})$ | $47.5 \mathrm{~kg}(105.0 \mathrm{lbs})$ |
| $2 \mathrm{bar} / 10 \mathrm{bar} / 50 \mathrm{bar}$ | $36.0 \mathrm{~kg}(79.6 \mathrm{lbs})$ | $51.0 \mathrm{~kg}(112.7 \mathrm{lbs})$ |
| 100 bar | $50.0 \mathrm{~kg}(110.5 \mathrm{lbs})$ | $65.0 \mathrm{~kg}(143.7 \mathrm{lbs})$ |
| Pneumatic with separator |  |  |
| 60 bar / 250 bar | $54.0 \mathrm{~kg}(119.3 \mathrm{lbs})$ | $69.0 \mathrm{~kg}(152.5 \mathrm{lbs})$ |
| 100 bar / 400 bar | $78.0 \mathrm{~kg}(172.4 \mathrm{lbs})$ | $93.0 \mathrm{~kg}(205.5 \mathrm{lbs})$ |
| Hydraulic with CPB5800 base | $56.5 \mathrm{~kg}(124.9 \mathrm{lbs})$ | $71.5 \mathrm{~kg}(158.0 \mathrm{lbs})$ |
| 60 bar / 250 bar / 600 bar | $80.5 \mathrm{~kg}(177.9 \mathrm{lbs})$ | $95.5 \mathrm{~kg}(211.1 \mathrm{lbs})$ |
| 100 bar / 400 bar / 1,000 bar |  |  |

| Version in psi | Weight |  |
| :--- | :--- | :--- |
|  | net | gross |
| Pneumatic |  |  |
| -14 psi | $32.0 \mathrm{~kg}(70.7 \mathrm{lbs})$ | $47.0 \mathrm{~kg}(103.9 \mathrm{lbs})$ |
| $30 \mathrm{psi} / 150 \mathrm{psi} / 1,000 \mathrm{psi}$ | $43.0 \mathrm{~kg}(95.0 \mathrm{lbs})$ | $58.0 \mathrm{~kg}(128.2 \mathrm{lbs})$ |
| 500 psi | $32.0 \mathrm{~kg}(70.7 \mathrm{lbs})$ | $47.0 \mathrm{~kg}(103.9 \mathrm{lbs})$ |
| $1,500 \mathrm{psi}$ | $61.5 \mathrm{~kg}(135.9 \mathrm{lbs})$ | $76.5 \mathrm{~kg}(169.1 \mathrm{lbs})$ |
| Pneumatic with separator |  |  |
| $1,000 \mathrm{psi} / 5,000$ psi | $60.0 \mathrm{~kg}(132.6 \mathrm{lbs})$ | $75.0 \mathrm{~kg}(165.8 \mathrm{lbs})$ |
| Hydraulic with CPB5800 base |  |  |
| $1,000 \mathrm{psi} / 5,000 \mathrm{psi} / 10,000 \mathrm{psi}$ | $62.5 \mathrm{~kg}(138.1 \mathrm{lbs})$ | $77.5 \mathrm{~kg}(171.3 \mathrm{lbs})$ |
| $14,500 \mathrm{psi}$ | $84.0 \mathrm{~kg}(185.6 \mathrm{lbs})$ | $99.0 \mathrm{~kg}(218.8 \mathrm{lbs})$ |

## Dimensions in mm (in)

The figure shows a CPB5000 pneumatic high-pressure base unit with the ConTect quick-release connector option. The versions for pneumatic low pressure and pneumatic with integrated gas to oil separator do not differ from it dimensionally, only in the arrangement of the control elements.

## CalibratorUnit model CPU6000

The models of the CPU6000 series are compact tools for use with a pressure balance (dead-weight tester). In particular when highly accurate measuring values, with measurement uncertainties of less than $0.025 \%$, are required, complicated mathematical calculations and corrections are necessary. With the CPU6000 in combination with the CPB-CAL (iPad ${ }^{\circledR}$ app) and/or WIKA-CAL (PC software) all critical ambient parameters can be registered and automatically corrected.

## The CPU6000 series is made up of three instruments

Weather station, model CPU6000-W
The CPU6000-W provides measured values such as atmospheric pressure, relative humidity and the ambient temperature of the laboratory environment.

Pressure balance sensor box, model CPU6000-S
The CPU6000-S measures the piston temperature and displays the floating position of the masses.

## Digital multimeter, model CPU6000-M

The CPU6000-M fulfils the function of a digital multimeter and power supply unit when electronic pressure transmitters must be calibrated.

## Typical application

CPB-CAL iPad ${ }^{\circledR}$ app
The iPad ${ }^{\circledR}$ application calculates the masses for pressure balances (dead-weight testers) or the reference pressure while taking the measured parameters from the CPU6000 into account. The conversion can be carried out in all common pressure units. As an additional parameter, the local gravity can be given for location-independent measurements.

## WIKA-CAL PC software - Weight calculator

With the demo version of the WIKA-CAL software and a CPB series pressure balance (dead-weight tester), the masses to be applied and the corresponding reference pressure can be determined. The pressure balance data (dead-weight tester data) can be entered into the database manually or imported automatically via an XML file available online.
All ambient parameters and piston temperature can be entered manually into WIKA-CAL or can be measured automatically with the CPU6000 series, so that the highest accuracy can be achieved. WIKA-CAL demo version can be downloaded free of charge from the WIKA website.

Further specifications on the CPU6000 series can be found in data sheet CT 35.02.
For details of the WIKA-CAL calibration software see data sheet CT 95.10.

## Further pressure balances / dead-weight testers within our calibration technology programme

Dead-weight tester in compact design, model CPB3800
Measuring ranges:

| Hydraulic | 1 ... 120 to 10 ... 1,200 bar (10 ... 1,600 to 100 ... 16,000 psi) |
| :---: | :---: |
| Accuracy: | $0.05 \%$ of reading |
|  | 0.025 \% of reading (optional) |

For specifications see data sheet CT 31.06

Hydraulic pressure balance, model CPB5800
Measuring ranges:

| Hydraulic | Single-piston measuring ranges: |
| :--- | :--- |
|  | $1 \ldots 120$ to $2 \ldots 300 \mathrm{bar}$ |
|  | $(10 \ldots 1,600$ to $30 \ldots 4,000 \mathrm{psi})$ |
|  | Dual-piston measuring ranges: |
|  | $1 \ldots 60 \mathrm{bar} / 10 \ldots 700 \mathrm{bar}$ to |
|  | $1 \ldots 60 \mathrm{bar} / 20 \ldots 1,400 \mathrm{bar}$ |
|  | $(10 \ldots 800 \mathrm{psi} / 100 \ldots 10,000 \mathrm{psi}$ to |
|  | $10 \ldots 800 \mathrm{psi} / 200 \ldots 20,000 \mathrm{psi})$ |
| Accuracy: | $0.015 \%$ of reading |
|  | up to $0.006 \%$ of reading (optional) |

For specifications see data sheet CT 31.11

Pressure balance for high pressure, model CPB5000HP
Measuring ranges:

| Hydraulic | $25 \ldots 2,500,25 \ldots 4,000$ or $25 \ldots 5,000 \mathrm{bar}$ |
| :--- | :--- |
|  | $(350 \ldots 40,000,350 \ldots 60,000$ or |
|  | $350 \ldots 70,000 \mathrm{psi})$ |
| Accuracy: | $0.025 \%$ of reading |
|  | $0.02 \%$ of reading (optional) |

For specifications see data sheet CT 31.51

Pressure balance for differential pressure, model CPB5600DP

Measuring ranges (= static pressure + differential pressure):

| Pneumatic | $0.03 \ldots 2$ to $0.4 \ldots 100 \mathrm{bar}$ |
| :--- | :--- |
|  | $(0.435 \ldots 30$ to $5.8 \ldots 1,500 \mathrm{psi})$ |
| Hydraulic | $0.2 \ldots 60$ to $25 \ldots 1,600 \mathrm{bar}$ |
|  | $(2.9 \ldots 1,000$ to $350 \ldots 23,200 \mathrm{psi})$ |
| Accuracy: | $0.015 \%$ of reading |
|  | $0.008 \%$ of reading (optional) |

For specifications see data sheet CT 31.56

## Accessories

## Set of fine increment masses M1 and F1

The masses included in the standard scope of delivery are ideally suited for everyday use. If even smaller intermediate values need to be generated, using one of the class M1 or F1 set of fine increment masses with the following masses is recommended:
$1 \times 50 \mathrm{~g}, 2 \times 20 \mathrm{~g}, 1 \times 10 \mathrm{~g}, 1 \times 5 \mathrm{~g}, 2 \times 2 \mathrm{~g}, 1 \times 1 \mathrm{~g}$,
$1 \times 500 \mathrm{mg}, 2 \times 200 \mathrm{mg}, 1 \times 100 \mathrm{mg}, 1 \times 50 \mathrm{mg}, 2 \times 20 \mathrm{mg}$,
$1 \times 10 \mathrm{mg}, 1 \times 5 \mathrm{mg}, 2 \times 2 \mathrm{mg}, 1 \times 1 \mathrm{mg}$

## Adapter sets for quick-release connector

As a standard, the pressure balance is equipped with a quick-release connector for connecting the test item. For this purpose, the following threaded inserts, which can be easily changed, are available:

- Adapter set: G ¼, G 3 $18,1 / 2$ NPT, $1 ⁄ 4$ NPT and M20 x 1.5
- Adapter set NPT: $1 / 8$ NPT, $1 / 4$ NPT, $3 / 8$ NPT and $1 / 2$ NPT

Additionally, the adapter sets include spare O-rings as well as a spanner with SW32 flats and SW14 flats, for changing the adapters.
Other threaded inserts are available on request.

## Dirt trap

For strongly soiled test items, a dirt trap should be used. This helps prevent the ingress of contaminants into the pressure balance.

Adapter set

## Dirt trap

| Designation/Version | Order no. |
| :---: | :---: |
| Set of fine increment masses ( 1 mg up to 50 g ), class F1 | 7093874 |
| Set of fine increment masses ( 1 mg up to 50 g ), class M1 | 14025325 |
| Adapter set for quick-release connector in case with $\mathrm{G} 1 / 4, \mathrm{G} 3 / 8,1 / 2 \mathrm{NPT}, 1 / 4 \mathrm{NPT}$ and $\mathrm{M} 20 \times 1.5$ threaded inserts for insertion in the knurled nut on the test item connector | 2036941 |
| Adapter set "NPT" for quick-release connector in case with $1 / 8$ NPT, $1 / 4$ NPT, $3 / 8$ NPT and $1 / 2$ NPT threaded inserts for insertion in the knurled nut on the test item connector | 12563626 |
| $90^{\circ}$ angle connection, for test items with back mounting connection | 1564838 |
| Dirt trap, $-1 \ldots+1,000$ bar (14,500 psi), volume 0.2 litre | 2015820 |
| Dirt trap, $-1 \ldots+1,000 \mathrm{bar}(14,500 \mathrm{psi})$, volume 0.03 litre | 2015714 |
| O-ring set consisting of 5 pcs. $8 \times 2$ and 5 pcs. $4 \times 2.2$ | 12328562 |
| Operating fluid for CPB5000 up to max. 4,000 bar ( 60,000 psi), 1 litre | 2099882 |
| Cleaning set for ConTect systems, pneumatic | 12485943 |
| Cleaning set for ConTect systems, hydraulic | 12481425 |
| Special test port with quick-release connector, for connection to the ConTect system entry, operation as a comparison test pump is possible | 2152634 |

## Scope of delivery

- Base with dust protection cover
- Priming pump (not on pneumatic base high pressure/ vacuum)
- Spindle pump for filling, pressure generation and fine pressure adjustment
- Piston connection with M30 $\times 2$ female thread

■ Quick connector for test items

- Piston-cylinder system with mass carrier
- Basic mass set in carrying case
- Extension mass set in carrying case (depending on the measuring range)
- Masses manufactured to local gravity (standard value: $9.80665 \mathrm{~m} / \mathrm{s}^{2}$ )
- VG22 mineral oil, 0.25 litre (for separator version)
- Sealing set for base CPB5000
- Operating instructions in German and English language
- Factory calibration certificate

## Options

- Systems with increased accuracy to $0.008 \%$
- Further pressure units
- Piston connection with ConTect quick-release connector
- Storage case for piston-cylinder systems
- Masses, manufactured to local gravity
- Tool set
- DKD/DAkkS calibration certificate
