

# **ILMK 307T**

# Level and Temperature Transmitter

**Ceramic Sensor** 

accuracy according to IEC 60770: 0.5 % FSO

## Nominal pressure / nominal temperature

from 0 ... 4 mH<sub>2</sub>O up to 0 ... 250 mH<sub>2</sub>O from 0 ... 30 °C up to 0 ... 70 °C others on request

#### **Output signals**

2-wire: 4 ... 20 mA (pressure) 2-wire: 4 ... 20 mA (temperature)

# Special characteristics

- diameter 26.5 mm
- separate output signals for pressure and temperature ranges
- good long term stability
- easy handling
- low maintenance and wiring costs

#### **Optional versions**

- different kinds of cables and elastomers
- customer specific versions

The stainless steel submersible probe ILMK 307T with flush mounted ceramic sensor has developed for continuous level and temperature measurement in water or waste water applications.

The advantage: simultaneous recording of level and temperature with separate independent signal amplification. The maintenance and wiring costs are considerably reduced.

In addition to classical signal processing of the level, an additional signal circuit independent of the level which converts the temperature signal into a 4 ... 20 mA analogue signal in 2-wire technology is provided.

#### Preferred areas of use are

#### Water

drinking water systems ground water monitoring domestic water tanks rain spillway basin

#### Sewage

waste water treatment, water recycling dumpsite, waste water tanks

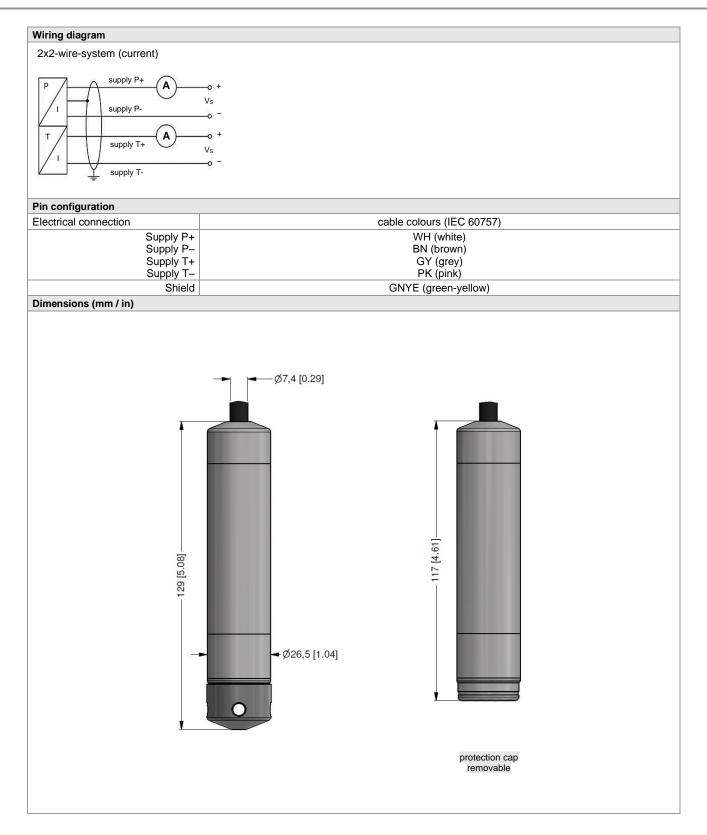

## Fuel and oil

fuel storage, tank farm, biogas plants
