

TC Temperature Transmitter IS 45800

Temperature Measuring with Thermocouple Sensors,
configurable via DIP Switch or USB

The TC Temperature Transmitter **IS 45800** is used for measure industrial process signals. It converts Thermocouple sensor signals to isolated standard signals.

Due to the easy setting of the calibrated measuring ranges via DIP switch the Transmitter is suitable for flexible use.

With the USB Programming-Kit Set the Transmitter can be configured and all data can be stored by a PC. In mode of programming no additionally auxiliary power is required.

The Commissioning Function, switchable on front panel, generates an output reference signal for testing and adjusting of the downstream signal path.

The auxiliary power can be supplied via the connection terminals or via the optional In-Rail-Bus connector. The status of power supply and sensor connection will be displayed by a LED on front.

- **Measuring input for all TC temperature sensors**
more than 1800 standard ranges ready to use
- **Easy configurable via DIP switches**
or via USB interface without auxiliary power supply
- **Switchable service functions**
for an easy commissioning
- **3-port isolation**
Protection against erroneous measurements due to parasitic voltages or ground loops
- **Extremely slim design**
6.2 mm slim housing for a simple and space saving DIN rail mounting
