

Diaphragm monitoring system with clamp connection For sanitary applications Model DMS-FP

WIKA data sheet DS 95.20

Applications

- Hygienic pressure measurement for the pharmaceutical industry and for aseptic food processing
- Pressure/vacuum measurement on pipelines, fermenters, bioreactors and vessels as well as with processing and transport of high-quality media
- Suitable for the production of active pharmaceutical ingredients (API)
- For gases, vapour; liquid, pasty, powdery and crystallising media

Special features

- Double-diaphragm system to ensure the separation of the process and the pressure measuring instrument
- Clamp connection easy to open for cleaning and seal replacement
- Suitable for SIP and CIP

Description

The WIKA combinations consisting of diaphragm seal, pressure measuring instrument and monitoring element are best suited for the harshest and hygienic measuring tasks. The systems can withstand the cleaning vapour temperatures occurring in SIP processes and ensure a sterile connection between the medium to be measured and the diaphragm seal.

The patented diaphragm monitoring has been designed specifically for the highest safety requirements in the pharmaceutical and biotechnology industries. The monitoring element is mainly used for electrical signal transmission of the diaphragm condition. In addition, the diaphragm condition is displayed on a dial with red/green areas.

In the event of a diaphragm rupture, a second, internal diaphragm in the pressure measuring instrument ensures the reliable separation of the environment and the process.

Diaphragm monitoring system, model DMS-FP

Mounting of the diaphragm seal to the measuring instrument is made as direct mounting as standard. A fluid inside the system, which is explicitly chosen to suit the particular application, hydraulically transmits the pressure to the pressure measuring instrument.

Diaphragm seals with clamp connection have been specifically developed for use in sterile processes and are integrated into the process by means of a clamp. This ensures the hygienic process integration of the diaphragm monitoring system.

The product WIKA model DMS-FP is protected under granted patent, see e.g. US 2018180505, DE 102016015447, CN 108240885.

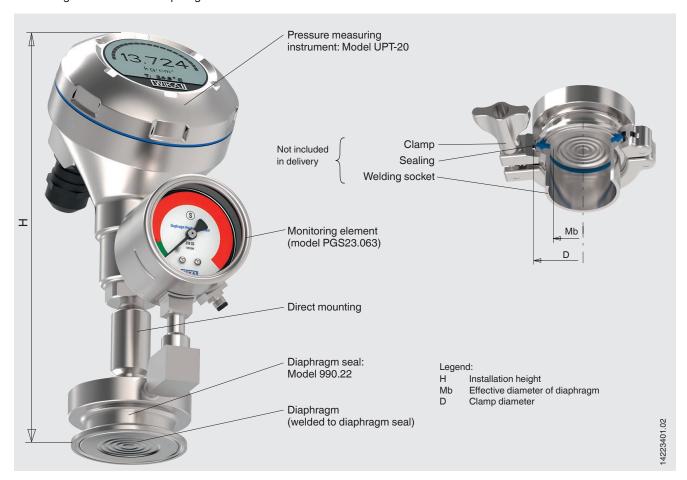

WIKA data sheet DS 95.20 \cdot 05/2022

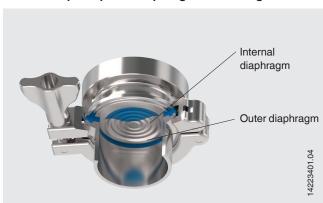

Illustrative example of a diaphragm monitoring system

The diaphragm monitoring system is a combination of pressure measuring instrument and diaphragm seal with an additional monitoring element for the diaphragm condition.

Functional principle of diaphragm monitoring

Diaphragm rupture

In the event of a diaphragm rupture, the pressure monitored in the intermediate space increases. As soon as the display of the monitoring element exceeds the preset limit value, an electrical/optical alarm signal is issued. This signals a diaphragm rupture.

WIKA's double-diaphragm design is the solution for critical processes where neither the medium should find its way into the environment, nor should the system fill fluid find its way into the product.

Normal operation

In normal operation, the pressure measurement and the diaphragm monitoring operate without limitations within the performance limits of the overall system design.

The space between the two diaphragms is evacuated. This vacuum is measured with the monitoring element and the status is displayed in the green area; there is no electrical alarm signal.

Safety

The measuring technology of the monitoring element withstands the process pressure despite the diaphragm rupture. The measuring function of the overall system remains unrestricted. The process reliability is guaranteed because the materials of the two diaphragms are made of the same material as the wetted parts of the diaphragm seal. The overall system is, nevertheless, damaged and must be replaced immediately.

Specifications

Diaphragm seal system							
Version	Pressure measuring instrum	Pressure measuring instrument mounted to a diaphragm seal with clamp connection, welded					
Scale range Gauge pressure in bar [psi]	0 2.5 [0 40] 0 10 [0 150]	0 4 [0 60] 0 16 [0 250]	0 6 [0 100] 0 25 [0 400]				
Scale range ¹⁾ Vacuum in bar [psi]		-1 3 [-30 inHg 45] -1 15 [-30 inHg 220]					
Permissible temperature range Medium Ambient Storage	+10 +80 °C [+50 +176 °F] for CIP and SIP max. +130 °C [+266 °F] +10 +40 °C [+50 +104 °F] +10 +60 °C [+50 +140 °F]						
Ingress protection per IEC/EN 60529	IP65						
Material ²⁾ wetted	Diaphragm: Stainless steel 1.4435 (316L); UNS S31603 Diaphragm seal: Stainless steel 1.4435 (316L); UNS S31603						
Surface roughness wetted non-wetted	Ra \leq 0.38 μ m [15 μ in] per ASME BPE SF4, electropolished [except for weld seam] Ra \leq 0.76 μ m [30 μ in] [except for weld seam]						
Mounting type	Direct mounting						
Level of cleanliness of wetted parts	Oil and grease free per ASTM G93-03 level F WIKA standard (< 1,000 mg/m²)						
System fill fluid	Medicinal white mineral oil h	KN 92 (FDA 21 CFR 172.878	, 21 CFR 178.3620(a); USP, EP, JP)				

¹⁾ Under vacuum, diaphragm monitoring is only possible to a limited extent

²⁾ Other materials on request

³⁾ In the event of a diaphragm rupture, the diaphragm monitoring is specified for process pressures \geq 0 bar rel.

The model PGS23.063 is recommended, since the electrical switch contact can be used for external alarm devices For further information on the models PGS23.063 and 232.30.063 see data sheets PV 22.03 and PM 02.04

Pressure measuring instrument: Process transmitter model UPT-20

Model UPT-20	
Output signal	4 20 mA
Load in Ω	\leq (U+ - U _{min}) / 0.023 A
Power supply	DC 12 36 V
Accuracy specifications	0.10 % of span
Material Case Sensor	Stainless steel 316Ti, electropolished or plastic (PBT) Stainless steel 316L

Dimensions in mm [in]

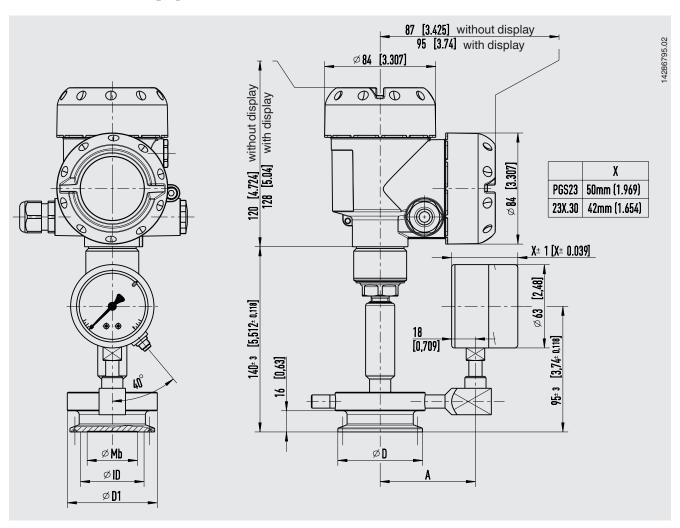

For further information on model UPT-20 see data sheet PE 86.05

Pressure measuring instrument: Process transmitter model IPT-20

Model IPT-20					
Output signal	4 20 mA 4 20 mA with a superimposed HART® communication signal (option: SIL qualification) HART® specification: 7.3 FOUNDATION™ Fieldbus PROFIBUS® PA				
Load in Ω	(U _B ₋ U _{Bmin}) / 0.022 A	U _B = Applied power supply U _{Bmin} = Minimum power supply			
Accuracy at room temperature 1)	Measuring ranges < 40 bar: ≤ 0.1 % of span				
Material Case Sensor	Double chamber case, aluminium die-casting AlSi10Mg, powder-coated on PE basis Stainless steel 316L				

¹⁾ Including non-linearity, hysteresis, zero offset and end value deviation (corresponds to measured error per IEC 61298-2). Calibrated in vertical mounting position with process connection facing downwards.

Dimensions in mm [in]

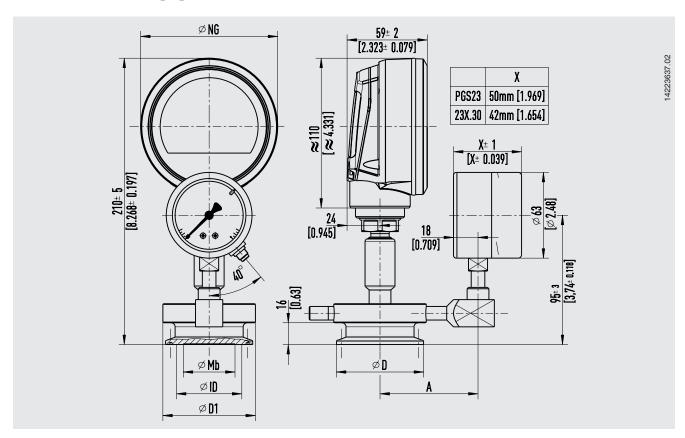

For further information on model IPT-20 see data sheet PE 86.06

Pressure measuring instrument: Digital pressure gauge model CPG1500

Model CPG1500					
Accuracy 1)	0.1 % FS				
Display	5% -digit 7-segment display (incl. a large matrix area for auxiliary information) Bar graph, 0 100 $%$ Selectable backlighting				
Rotatable case	The case is rotatable by 330°.				
Resolution	4 5 ½ digits; adjustable				
Voltage supply Power supply Maximum voltage Battery life Battery status display	3 x 1.5 V AA alkaline batteries ²⁾ DC 4.95 V (sparking) typical 2,000 2,500 h (without backlighting and WIKA-Wireless not active) Symbol display with 4 bars indicates the battery status in 25 % steps				
Material Case Sensor	Aluminium die-casting, nickel-plated Stainless steel 316				

¹⁾ It is defined by the total measurement uncertainty, which is expressed with the coverage factor (k = 2) and includes the following factors: the intrinsic performance of the instrument, the measurement uncertainty of the reference instrument, long-term stability, influence of ambient conditions, drift and temperature effects over the compensated range during a periodic zero point correction.

Dimensions in mm [in]

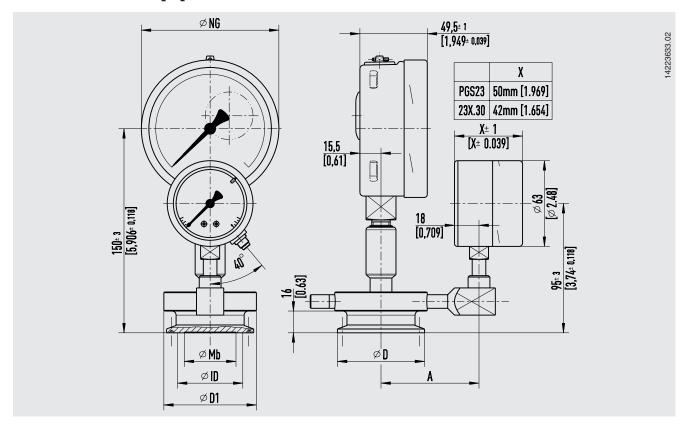

For further information on model CPG1500 see data sheet CT 10.51

²⁾ For hazardous areas, only the following models are permitted:
- Duracell, Simply by Duracell MN1500
- Duracell, Duralock Plus Power MN1500
- Varta, RAYOVAC Maximum Plus 4006

Pressure measuring instrument: Bourdon tube pressure gauge model 23x.50.100

Model 23x.50,100	
Nominal size	100 [4.0"]
Ingress protection per IEC/EN 60529	IP65
Pressure limitation	Steady: 3/4 x full scale value Fluctuating: 2/3 x full scale value Short time: Full scale value
Material Case Pressure element Movement Dial Pointer Window	Stainless steel, with solid baffle wall (Solidfront) and blow-out back, scale ranges ≤ 0 16 bar (lower mount) with compensating valve to vent case Stainless steel 316L Stainless steel 316L Aluminium, white, black lettering Aluminium, black Laminated safety glass

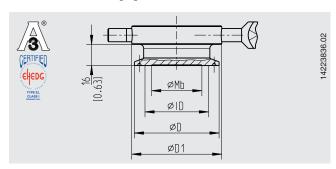

Dimensions in mm [in]

For further information on model 23x.50.100 see data sheet PM 02.04

WIKA-Cal calibration software

Easy and fast creation of a high-quality calibration certificate

The WIKA-Cal calibration software is used for generating calibration certificates or logger protocols for pressure measuring instruments and is available as a demo version for a cost-free download.

A template helps the user and guides him through the creation process of a document.

In order to switch from the demo version to a full version of the respective template, a USB stick with the template must be purchased.

The pre-installed demo version automatically changes to the selected full version when the USB stick is inserted and remains available as long as the USB stick is connected to the computer.

- Creation of calibration certificates for mechanical and electronic pressure measuring instruments
- A calibration assistant guides you through the calibration
- Automatic generation of the calibration steps
- Generation of 3.1 certificates per DIN EN 10204
- Creation of logger protocols
- User-friendly interface
- Languages: German, English, Italian and more due with software updates

For further information see data sheet CT 95.10

Calibration certificates can be created with the Cal-Template and logger protocols can be created with the Log-Template.

Cal Demo

Generation of calibration certificates limited to 2 measuring points, with automatic initiation of pressures via a pressure controller.

Cal Light

Generation of calibration certificates with no limitations on measuring points, without automatic initiation of pressures via a pressure controller.

Log Demo

Creation of data logger test reports, limited to 5 measured values.

Loc

Creation of data logger test reports without limiting the measured values.
