

Float switch

For the process industry, horizontal installation

Models HLS-S, HLS-P

WIKA data sheet LM 30.02

for further approvals
see page 2

Applications

- Level detection for almost all liquid media
- Pump and level control
- Chemical, petrochemical industry, natural gas, offshore, shipbuilding, machine building, power generating equipment, power plants
- Process water and drinking water treatment

Special features

- Large range of application due to the simple, proven functional principle
- For harsh operating conditions, long service life
- Operating limits:
 - Operating temperature: $T = -120 \dots +350 \text{ }^{\circ}\text{C}$
 - Operating pressure: $P = \text{Vacuum to } 232 \text{ bar}$
 - Limit density: $\rho \geq 500 \text{ kg/m}^3$
- Stainless steel and plastic versions
- Explosion-protected versions

Description

In addition to the various applications for float switches for vertical installation (model FLS), the model HLS horizontal float switches likewise offer innumerable possibilities to monitor and/or switch levels in order to indicate minimum/maximum levels.

The float is attached to a supported, swivelling lever and moves with the level of the medium being measured. By means of a permanent magnet, fixed to the end of the lever, when a preset switch point is reached, a reed contact (inert gas contact) within the contact tube is actuated.

Fig. top: Stainless steel version, model HLS-S

Fig. bottom: Plastic version, model HLS-P

By using a permanent magnet and a reed contact the switching operation is non-contact, free from wear and needs no power supply. The functioning of the float switch is independent of foaming, conductivity, vapours, bubble formation and vibrations.

The signal processing is universal. Direct connection to PLCs, NAMUR connections, signal amplifiers or contact protection relays is possible.

The float switch is simple to mount and maintenance-free, so the costs of mounting, commissioning and operation are low.

Model overview

Model	Description	Materials	
		Stainless steel 1.4571 (316Ti)	Polypropylene (PP)
HLS-SA HLS-SB	Standard version	x	-
HLS-P	Plastic version	-	x
HLS-SBI (HAG)	Intrinsically safe, Ex i	x	-

Temperature range (process)

- Model HLS-SA, HLS-SB -120 ... +350 °C
- Model HLS-P -10 ... +80 °C
- Model HLS-SBI -50 ... +180 °C

Operating pressure

- Model HLS-SA, HLS-SB 232 bar
- Model HLS-P 6 bar
- Model HLS-SBI 180 bar

Contact protection measures

The reed contacts should be protected against any voltage or current spikes that might occur.

Depending on the different load types different protective circuits are used.
