## Compact pressure switch For industrial applications Model PSM01

## Applications

- Hydraulics
- Pneumatics
- Mobile working machines
- General machine building

## Special features

■ Setting ranges: $0.2 \ldots 2$ bar [3 ... 30 psi$]$
to $30 \ldots 320$ bar [450 ... 4,600 psi] and $-0.85 \ldots-0.15$ bar [ $-25 \mathrm{inHg} \ldots-5 \mathrm{inHg}$ ]

- Non-repeatability of the switch point: $\leq 2 \%$
- Switching functions: Normally closed, normally open or change-over contact
- Media: Compressed air, neutral and self-lubricating fluids and neutral gases

## Description

Model PSM01 screw-in pressure switches in a diaphragm or piston design open or close a circuit, depending on whether the pressure is falling or rising. An adjustment screw enables easy and convenient on-site setting of the required switch point. Optionally, WIKA offers its customers the factory setting of the switch point.

Compact pressure switch, model PSM01

The model PSM01 pressure switch is suitable for applications where compressed air, neutral and self-lubricating fluids as well as neutral gases are used.

This pressure switch features a good non-repeatability of the switch point of $\leq 2 \%$ of the span. The compact design is suitable for easy mounting with a socket wrench. The switch is interesting for both OEM customers and customers with low volumes.

1) Only for pressure switches with adjustable switch point. For instruments with fixed factory setting, see "Non-repeatability" on page 3.

The given setting ranges are also available in MPa.

## Switch point setting

■ No factory setting, adjustable

- Factory setting, adjustable
- Fixed factory setting, not adjustable

The main selection criterion for the pressure switch is the max. working pressure (see table "Setting ranges") which can be reached in the application.
From that follows the choice of the setting range in which the desired switch point must lie. The switch point should be in the the range of $30 \ldots 70 \%$ of the setting range end value. This enables an optimal repeatability and ease of setting of the switch point.

For the switch point setting "Fixed factory setting, not adjustable", the ordering information of max. working pressure (20 bar [300 psi], 60 bar [870 psi] or 350 bar [5,000 psi]), together with the desired switch point, is sufficient. With this ordering information, the pressure switch can be optimally designed, set and sealed with respect to non-repeatability and long service life. The selection of the setting range is not required with this variant.

## Switch contact

High-quality snap-action switch with self-cleaning, solid silver contacts (optionally gold-plated)

## Materials

## Wetted parts

■ Galvanised steel

- Stainless steel 303
- PTFE sealing at the piston (only piston version)

For sealing materials, see "Permissible temperature ranges", page 3.

## Non-wetted parts

Case: Galvanised steel or stainless steel

The choice of material for the process connection means that the case is made of the same material.
