## Ball Valves and Ball Valve Manifolds

# Introduction

## Introduction

The AS-Schneider Group with its headquarters in Germany is one of the World's Leading Manufacturers of Instrumentation Valves and Manifolds. AS-Schneider offers a large variety of Ball Valves, Ball Valve Manifolds and the relevant Accessories required for instrumentation installations globally.

Selection can be made from a comprehensive range of bodies with a variety of connections and material options, optimizing installation and access opportunities. Many of the valves shown in this catalogue are available from stock or within a short period of time. The dimensions shown in this catalogue apply to standard types. If you need the dimensions for your individual type please contact the factory.

Continuous product development may from time to time necessitate changes in the details contained in this catalogue. AS-Schneider reserves the right to make such changes at their discretion and without prior notice.

All dimensions shown in this catalogue are approximate and subject to change.

# KA, KB & KC Series I General Features

## Standard Features

**KA Series**

**KB Series**

**KC Series**

Series	KA	KB	KC
Bore Size mm (inch)	Ø 10 (0.39")	Ø 14 (0.55")	Ø 20 (0.79")
Basic Design	2 Piece Body Design		
	Anti-Blowout Stem		
	Floating Ball Design – Bi-Directional		
	Low Operating Torque		
	Anti-Static Design acc. to ISO 17292		
Body Shape	Square	Hexagon	
Seat Material / max. allowable (Working) Pressure (PS) bar (psi)	Reinforced PTFE 420 (6,092)	PEEK 420 (6,092)	
	PEEK 420 (6,092)	Reinforced PTFE 150 (2,175)	
	PEEK 689 (10,000) Uni-Directional		
Stem Seal Material	PTFE or Graphite	Reinforced PTFE	
Fugitive Emission Application		Tested and certified acc. to ISO 15848-1	
Fire Test	Fire-type tested and certified acc. to ISO 10497 / API 607 – For PEEK Ball Valve Seat only		

### Sour Gas Service:

Wetted parts according to a.m. material list are supplied as standard according to NACE MR0175/MR0103 and ISO 15156 (latest issue).

### Low Temperature Service:

On request.

### Oxygen Service:

On request.

### Pressure Test:

A shell test at 1.5 times the max. allowable (working) pressure and a seat leakage test are performed acc. to EN 12266-1 - P10, P11 and P12 respectively MSS-SP61 (and complies also with ASME B31.1 and B31.3) at every standard AS-Schneider Ball Valve → 100% Pressure Tested!

Pressure Test acc. to API 598 on request.

### Certification:

Certified Mill Test Report (CMTR) as Inspection certificate 3.1 acc. to EN 10 204 for valve body material and pressure test available on request.

PMI Test on request.

**Handle Options and Body Design Options see Page 10.**

## Manufactured acc. to the following Codes and Specifications

- ASME B16.34 Valves – Flanged, Threaded and Welding End
- ASME B31.3 Process Piping
- ASME B31.1 Power Piping

# KA, KB & KC Series I Materials

## Body Material Options

Material Group	AS Material Designation	Material No.	Short Name	Equivalent UNS-No.	Material Grade acc. to ASTM
Carbon Steel	A105				A105
Austenitic Stainless Steel	316 quadruple certified*	1.4401	X5CrNiMo17-12-2	S31600	316
		1.4404	X2CrNiMo17-12-2	S31603	316L
	6Mo	1.4547	X 1CrNiMoCuN20-18-7	S31254

# KA Series I Standard Ball Valve Design

## Standard Ball Valve Design – Bore Size 10 mm (0.39")

**Screwed Design** – Stem Seal: Packing

### Features

- Floating Ball Design
- Ball Valve Seat:
  - Reinforced PTFE or
  - PEEK
- Ball Seats are encapsulated in end connector / body
- Stem Seal: Standard Packing in PTFE and Graphite
- Anti-Static Design as Standard acc. to ISO 17292
- Anti-Blowout Stem Design
- Seat Leakage Class VI acc. to ANSI/FCI 70-2
- Positive Stop Pins
- Max. allowable (Working) Pressure (PS): 420 bar (6,092 psi) with PTFE and PEEK Seats → Bi-Directional
- Max. allowable (Working) Pressure (PS): 689 bar (10,000 psi) with PEEK Seats only → Uni-Directional
- All Non-wetted Parts in 316 Stainless Steel
- Fire Safe tested acc. to ISO 10497 and API 607 for PTFE and PEEK

## Pressure-Temperature Ratings

Note: Above-mentioned Pressure-Temperature Ratings are based on the standard material 316 stainless steel. Other materials as shown on page 5 might have different Pressure-Temperature Ratings.

### Low Temperature Limits:

KA1 / KA2 Type 420 bar (6.092 psi): -40°C

### Low Temperature Limits:

KA3 Type 420 bar (6.092 psi): -30°C  
 KA3 Type 689 bar (10.000 psi): -30°C  
 KA4 Type 420 bar (6.092 psi): -30°C

# KB & KC Series I Standard Ball Valve Design

## Standard Ball Valve Design – Bore Size 14 mm (0.55") and 20 mm (0.79")

**Screwed Design** – Stem Seal: Packing

### Features

- Floating Ball Design – Bi-Directional
- Ball Valve Seat:
  - PEEK or
  - Reinforced PTFE optional
- Self Venting Ball Seats
- Stem Seal: Reinforced PTFE Packing
- Metal Sealing between body and end connector
- Anti-Static Design as standard acc. to ISO 17292
- Max. allowable (Working) Pressure (PS):
  - 420 bar (6,092 psi) with PEEK Seats and
  - 150 bar (2,175 psi) with RPTFE Seats
- Anti-Blowout Stem Design
- Seat Leakage Class VI acc. to ANSI/FCI 70-2
- Positive Stop Pins
- All Non-wetted Parts in 316 Stainless Steel
- Fire Safe tested and certified – For PEEK Ball Valve Seat only
- Ball Valve tested and certified acc. to ISO 15848-1  
(Measurement, test and qualification procedures for fugitive emissions)

### Standard Design Material 316

### Design concerning Exotic Materials

### Pressure-Temperature Ratings

Above-mentioned Pressure-Temperature Rating is based on the standard material 316 stainless steel.

Other materials as shown on page 5 might have different Pressure-Temperature Ratings.

# KA, KB & KC Series I Options

## Ball Valve Options

### Loose Handle

Handle is supplied separately.  
(Option Code R)

KA	KB	KC
available	on request	

### Lockable Handle

Valves can be locked in either the open or closed position with a padlock (Option Code W). Lockable Handle incl. Padlock (Option Code U).

KA	KB	KC
available		

### Oval Handle

Oval Handle – Optional to standard lever type.  
(Option Code Q)

KA	KB	KC
available	-	

### Multi-Ported Ball Valve

Three ports of same size. (Option Code T)

KA	KB	KC
available	on request	

### Extended Body

Extended Body – Extended by approx. 60 mm (2.4") and a L1 of 115 (4.52") at KA, 128 (5.04") at KB and 145 (5.7") at KC Series. (Option Code E)

KA	KB	KC
available	on request	

### Panel Mount

Valve can be mounted to panels up to a thickness of 6 mm (0.24") – Delivered with suitable bolts. (Option Code C)

KA	KB	KC
on request

# BA Series I Ball Valve Design

## Standard Ball Valve Design – Bore Size 10 mm (0.39")

### Features

- Floating Ball Design
- Ball Valve Seat:
  - Reinforced PTFE or
  - PEEK
- Ball Seats are encapsulated in end connector / body
- Stem Seal: Standard Packing in PTFE and Graphite
- Anti-Static Design as Standard acc. to ISO 17292
- Anti-Blowout Stem Design
- Seat Leakage Class VI acc. to ANSI/FCI 70-2
- Max. allowable (Working) Pressure (PS): 420 bar (6,092 psi) with PTFE and PEEK Seats → Bi-Directional
- Max. allowable (Working) Pressure (PS): 689 bar (10,000 psi) with PEEK Seats only → Uni-Directional
- Positive Stop Pins
- All Non-wetted Parts in 316 Stainless Steel

Note: Ball Valve Manifolds with Bore Size 14 / 20 mm available on request.

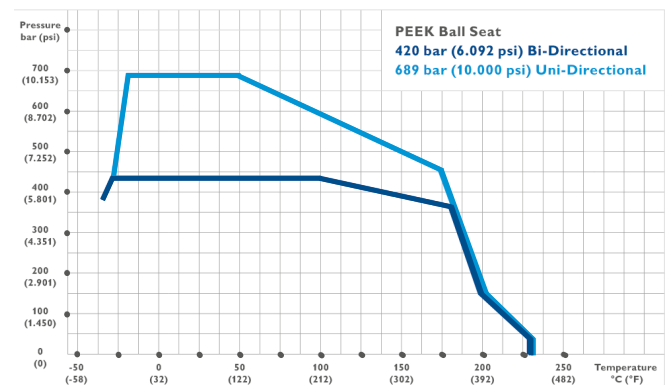

### Lockable Handle Design

Valves can be locked in either the open or closed position with a padlock (Option Code W). Lockable Handle incl. Padlock (Option Code U).

## Pressure-Temperature Ratings – Ball Valve

Note: Above-mentioned Pressure-Temperature Ratings are based on the standard material 316 stainless steel. Other materials as shown on page 18 might have different Pressure-Temperature Ratings.

### Low Temperature Limits:

- Seal Material: Ball Seat RPTFE -40°C
- Ball Seat PEEK -30°C

# BA Series I Block & Bleed Ball Valve Manifolds

## Block & Bleed Valves

The Double Block & Bleed Ball Valve Manifolds are combining a Primary Isolate Ball Valve and a choice of Ball or Needle Vent/Bleed Valve into one body for applications up to 10,000 psi (689 bar).

The standard end connections are 1/2 NPT, for further options please see ordering information on page 19 or contact the factory.

## Ball Valve Manifolds with Ball Pattern Isolate (Block) and Needle Pattern Vent

### Side Vent - Type BABA

### Bottom Vent - Type BABD/BABC

## Ball Valve Manifolds with Ball Pattern Isolate (Block) and Vent

### Type BACA/BACB

# BA Series I Double Block & Bleed Ball Valve Manifolds

## Double Block & Bleed Valves

The Double Block & Bleed Ball Valve Manifolds are combining a Primary and Secondary Isolate Ball Valve and a choice of Ball or Needle Vent/Bleed Valve into one body for applications up to 10,000 psi (689 bar). The standard end connections are 1/2 NPT, for further options please see ordering information on page 19 or contact the factory.

## Ball Valve Manifolds with Ball Pattern Isolate (Block) and Needle Pattern Vent

### Side Vent - Type BADA

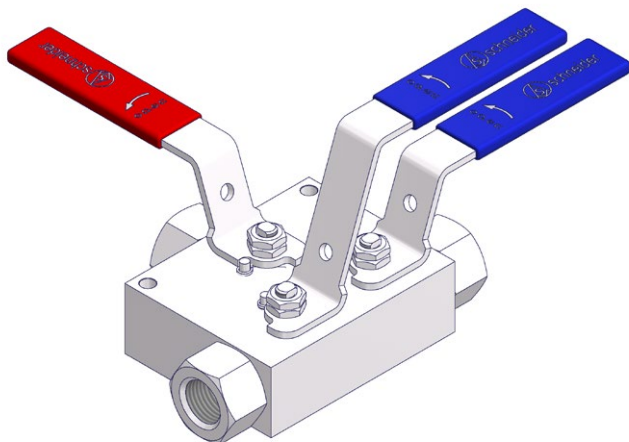

### Bottom Vent - Type BADD/BADC

## Ball Valve Manifolds with Ball Pattern Isolate (Block) and Vent

### Type BAEA/BAEB

# BA Series I Needle Valve Design

## Standard Needle Valve Design – Bore Size 5 mm (0.197")

### Features

- Integral Valve Seat – Metal to Metal Seated
- Non-rotating Needle
- External Stem Thread – Packing below stem threads. Stem Threads are protected from process media (non-wetted, helps to prevent stems from galling)
- Stem with cold rolled threads
- Blow-out proof Needle
- Back Seat – Metal to Metal secondary needle seal
- Lock Pin – Eliminates unauthorized removal of the bonnet
- Color Coded Dust Cap for Operating thread protection
- Standard Packing in PTFE and Graphite available
- Max. allowable (Working) Pressure (PS):  
420 bar (6,092 psi)  
– 689 bar (10,000 psi) optional
- Anti-Tamper Valve Head Options available
- All non-wetted Parts in 316 stainless steel

### Standard Design 420 bar (6,092 psi)

### High Pressure Design 689 bar (10,000 psi)

Body-to-Bonnet Seal is below the threads eliminating process fluid corrosion.

### Anti-Tamper Valve Head Unit

## Pressure-Temperature Ratings – Needle Valve

### Low-temperature Limits:

- PTFE and Graphite Packing: -40°C (-40°F)
- Carbon Steel ASTM A105: -29°C (20.2°F)

# BA Series I Double Block & Bleed Ball Valve Manifold Dimensions

# K Series I General Features

## K Series Ball Valves

AS-Schneider's K Series Ball Valves are very robust, forged ball valves which are designed especially for severe service for the chemical and petrochemical process industry. They Are especially used for close coupled hook-ups. End connector and valve body are full penetration welded for environmental protection.

Selection can be made from a comprehensive range of bodies with a variety of connections and material options, optimizing installation and access opportunities. Many of the types shown in this catalogue are available from stock or within a short period of time.

## Features

- Floating Ball Design – Bi-Directional
- 2 Piece Design – Fully Welded
- Forged Body in 1.0460 / A105 and 316
- Ball Bore Size 10 mm (0.39")
- Ball Seats are encapsulated in Seat Carrier
  - Material: PTFE or Carbon filled PTFE
- Stem Seal: PTFE or Graphite
- Max. allowable (Working) Pressure (PS): 250 bar (3,626 psi) | Class 1,500
- Anti-Blowout Stem Design
- Anti-Static Design
- Low Operation Torque
- Fire Safe tested acc. to ISO 10497 / API 607
- Wide Range of Connections available
- Pressure Test acc. to ISO 5208
  - Leakage Rate A acc. to ISO 5208
- Seat Leakage Class VI acc. to ANSI/FCI 70-2
- Materials comply to NACE MR 0175 / MR0103 / ISO 15156
- Ergonomic Oval Handles – Can be locked in opened and closed Position

## Optional Features

- Fugitive Emission Bonnet – TA-Luft conformity optional
- Vented Ball
- Spring Loaded Ball Seat } Uni-Directional
- Ball Seat: PEEK, PCTFE and PFA
- Stellited Ball
- Padlock for Lockable Handle
- Extended Stem
- Cryogenic Applications tested acc. BS 6364
- Special Cleaning for Chlorine and Oxygen Service
- Optional Materials: ASTM A350-LF2, Alloy 400, Alloy C-276, Duplex, Etc.

For further Details, please contact the factory.

# KM Series I Metal Seated Ball Valves

## KM Series I Metal Seated Ball Valves

Extreme operating conditions with temperatures up to 450°C (842°F) and pressures up to 420 bar (6,092 psi) require special sealing technology in ball valves.

Standard Soft Seated Ball Valves simply aren't ready for this kind of requirements. Their plastic seals would fail. Metal Seated Ball Valves don't have this problem. However, most Metal Seated Ball Valves are not available for high pressures and also not available for smooth operation. AS-Schneider entered the Metal Seated Ball Valve arena with the KM Series.

When developing the KM Series AS-Schneider uses the latest surface and material knowledge combined with comprehensive engineering know-how. The result is a ball valve with zero leakage even under extreme operating conditions with respect to working pressure and temperature – even though a smooth operation is provided.

## Features

- 2 Piece Design – Fully Welded
- Ball Bore Size 10 mm (0.39")
- Seat and Ball Surfaces coated with Hardalloy and Carbide compounds
- 'Dissolution' Ball Valve Design and an outstanding axial bearing washer at the stem – For smooth operation (even at high working pressures)
- Double Sealing System in fugitive emission bonnet consisting of premium-quality graphite sealing rings
- Pressure Rating: Class 2,500
- Max. allowable Temperature (TS): -29°C (-20°F) to 450°C (842°F)
- Anti-Blowout Stem Design
- Can be locked in opened and closed position
- Oval Handle can be dismantled during operation
- Even Non-wetted Parts are made of 316 Stainless Steel for operation in corrosive environments
- Seat Leakage: ANSI / FCI 70-2 Class V
- Body Material: 1.4401 / 316 or LF2 / A105N
- Materials comply to NACE MR 0175 / MR0103 / ISO 15156
- Ball Valve meets requirements of TA-Luft (leak rate < 4,6 x 10<sup>-6</sup> mbar x l/s)
- Fire Safe tested acc. to ISO 10497 and API 607
- Design Basis: ISO 17292, ASME B16.34, MESC SPE 77/170, MESC SPE 77/110

## Pressure-Temperature Rating

1. Fugitive Emission Bonnet with Double Sealing System and Lantern Ring
2. Outstanding Axial Bearing washer integrated at the Stem
3. Smooth Operation due to 'Dissolution' Ball Valve Design
4. Seat and Ball Surfaces coated with Hardalloy and Carbide compounds
5. Adjustment Capability for Packing with Gland Follower
6. Oval Handle can be dismantled during operation

# KM Series I Innovative 'Dissolution' Ball Valve Design

## Best tightness performance with maximum comfort

Large forces are required to preserve the tightness between ball and ball seats and the tightness between ball seats and valve body. These forces are often applied by a screw connector or when assembling the ball valve body (for example a three piece body).

In a conventional design, the transmission of force of the ball seat to valve body sealing is being effected directly by the ball, so as the pressure increases, the actuation torque also rises significantly. The max. allowable (Working) Pressure (PS) of Metal Seated Ball Valves from most manufacturers is thus about 100 bar – because this is the limit that still permits actuation of the valve.

With the 'Dissolution' Ball Valve Design, AS-Schneider has introduced an innovative solution. This patented design offers an optimum distribution of forces and loads in the valve, so they are only present where they are actually needed. The ball valve can thus be actuated without problems even under extreme conditions.

### Conventional Ball Valve Design

The forces required to maintain the tightness are stressing all components - even the ball and ball seats. The operating torque is thus very high.

### 'Dissolution' Ball Valve Design

The forces needed to maintain the tightness between ball seat and valve body are only directed onto the corresponding graphite seal rings. The ball is only spring-loaded, which ensure a low, defined, minimum pressure off the balls on the ball seat. A smooth operation is the consequence.

## KM Series Ball Valve | Examples

# Low Pressure Ball Valves 1,000 psi (69 bar)

## Features

- Floating Ball Design
- One Piece Design
- Reduced Bore
- Ball Valve Seat – PTFE
- Body and Stem: 316 Stainless Steel
- Stem Seal: PTFE
- Max. allowable (Working) Pressure (PS): 69 bar (1,000 psi)
- Anti-Blowout Stem Design
- Connections: Female NPT Threaded
- Test Standard: API 598
- Steam Rating: 125 psi (8.6 bar) WSP
- NACE MR0175 available
- 2 Handles are available:
  - Lockable Handle
  - Butterfly Handle
